earth's resources Management of natural resources implies knowledge regarding their state distribution and dynamics This in turn implies the active collection and recording of environmental data In fact such data have been collected throughout history From the earliest civilizations inventories through field surveys have been made concerning the spatial organization of the environment These have then been translated through the process of cartography into maps maps for navigation for military use for agriculturalists maps of a general nature such as topographic maps and thematic maps showing more specific themes such as land use **Satellite Remote Sensing for Resources Development** 3Island Press,1986-03-01

anthropogenic and non anthropogenic features and processes of the Earth But some research goes beyond these modest aims and creates new opportunities for further research or affects the process of knowledge acquisition more broadly or changes the way other researchers in a domain think about the world and go about their business Due to its positive impacts transformative research can be regarded as inherently having greater value than more conventional research and funding agencies clearly regard transformative research as something to be encouraged and funded through special programs Assessments of transformative research funding initiatives are few and provide a mixed picture of their effectiveness The challenge is whether transformative research can be identified at the time it is proposed rather than after it has been conducted communicated and its influence on the discipline has become clear Fostering Transformative Research in the Geographical Sciences reviews how transformative research has emerged in the past what its early markers were and makes recommendations for how it can be nurtured in the future
