the nation's armed forces to meet the military challenges of the 21st century. Currently the opportunity exists to carry out experiments at individual and joint service levels to facilitate this transformation. Experimentation which involves a spectrum of activities including analyses, war games, modeling and simulation, small focused experiments and large field events among other things provides the means to enhance naval and joint force development. To assist the Navy in this effort the Chief of Naval Operations CNO asked the National Research Council (NRC) to conduct a study to examine the role of experimentation in building future naval forces to operate in the joint environment. The NRC formed the Committee for the Role of Experimentation in Building Future Naval Forces to perform the study.

Sedimentary Basins and Petroleum Geology of the Middle East A.E.M. Nairn, A.S. Alsharhan, 1997-12-11. The wealth of petroleum has made the Middle East one of the most actively explored regions of the world. The volume of geological, geophysical and geochemical data collected by the petroleum industry in recent decades is enormous. The Middle East may be a unique region in the world where the volume of subsurface data and information exceeds that based on surface outcrop. This book reviews the tectonic and geological history of the Middle East and the regional hydrocarbon potential on a country by country basis in the context of current ideas developed through seismic and sequence stratigraphy and incorporating the ideas of global sea level change. Subsurface data have been used as much as possible to amplify the descriptions. The paleogeographic approach provides a means to view the area as a whole. While the country by country approach inevitably leads to some repetition it enhances the value of the volume as a teaching tool and underlines some of the changing lithologies within formations carrying the same name. Sea Strike James H. Cobb, 1997. Action packed. Commander Amanda Garrett and her stealthy destroyer are drawn into an incipient war between Taiwan and China.

Autonomous Vehicles in Support of Naval Operations National Research Council, Division on Engineering and Physical Sciences, Naval Studies Board, Committee on Autonomous Vehicles in Support of Naval Operations, 2005-09-05. Autonomous vehicles (AVs) have been used in military operations for more than 60 years with torpedoes, cruise missiles, satellites and target drones being early examples. They have also been widely used in the civilian sector for example in the disposal of explosives for work and measurement in radioactive environments by various offshore industries for both creating and maintaining undersea facilities for atmospheric and undersea research and by industry in automated and robotic manufacturing. Recent military experiences with AVs have consistently demonstrated their value in a wide range of missions and anticipated developments of AVs hold promise for increasingly significant roles in future naval operations. Advances in AV capabilities are enabled and limited by progress in the technologies of computing and robotics, navigation, communications and networking, power sources and

propulsion and materials Autonomous Vehicles in Support of Naval Operations is a forward looking discussion of the naval operational environment and vision for the Navy and Marine Corps and of naval mission needs and potential applications and limitations of AVs This report considers the potential of AVs for naval operations operational needs and technology issues and opportunities for improved operations *Options for the Navy's Future Fleet* Eric Jackson Labs,2006 **Department of**
