Physiological Diversity John Spicer, Kevin

Gaston, 2009-04-01 Ecologists have always believed at least to a certain extent that physiological mechanisms serve to underpin ecological patterns. However, their importance has traditionally been at best underestimated and at worst ignored, with physiological variation being dismissed as either an irrelevance or as random noise error. Spicer and Gaston make a convincing argument that the precise physiology does matter. In contrast to previous works which have attempted to integrate ecology and physiology, *Physiological Diversity* adopts a completely different and more controversial approach in tackling the physiology first before moving on to consider the implications for ecology. This is timely given the recent and considerable interest in the mechanisms underlying ecological patterns. Indeed, many of these mechanisms are physiological. This textbook provides a contemporary summary of physiological diversity as it occurs at different hierarchical levels: individual, population, species, etc., and the implications of such diversity for ecology and, by implication, evolution. It reviews what is known of physiological diversity and, in doing so, exposes the reader to all the key works in the field. It also portrays many of these studies in a completely new light, thereby serving as an agenda for and impetus to the future study of physiological variation. *Physiological Diversity* will be of relevance to senior undergraduates, postgraduates, and professional researchers in the fields of ecology, ecological physiology, ecotoxicology, environmental biology, and conservation. The book spans both terrestrial and marine systems.

Biogeochemistry of the Atmosphere, Ice and Water of the White Sea Alexander

P. Lisitsyn, Viacheslav V. Gordeev, 2019-02-01 This book is devoted to the biogeochemical environment of the White Sea, an inland sea in the Northwestern region of Russia. It provides a comprehensive review and discusses the latest research findings on the oceanology, sedimentology, and biogeochemistry of the White Sea water column. The topics discussed include the regulation of the physico-geographical conditions in the White Sea basin, dispersed sedimentary substance of the atmosphere, and the cryosphere; the geochemical peculiarities of the river discharge into the White Sea; and the phyto- and zooplankton activities in the White Sea. Taking the biggest river in the White Sea basin as an example, the authors closely examine the deposition of suspended particulate matter, the biogeochemical behaviour of dissolved and suspended forms of organic material, and the significant group of chemical elements in the river-sea mixing zone of the Severnaya Dvina River. The book ends with a summary of the key conclusions and recommendations. Together with the companion volume *Sedimentation Processes in the White Sea*, *The White Sea Environment Part II*, it offers an essential source of information for postgraduate students, researchers, and stakeholders alike.
