

- **Seeing, Doing, and Knowing: A Philosophical Theory of Sense Perception**, by Mohan Matthen. Oxford: Oxford University Press, 2005. Pp. xxii + 362. H/b xx, P/b xx.

In the prelude to Matthen's marvelous *Seeing, Doing, and Knowing*—"The New Philosophy of Vision"—he welcomes a comparatively recent development in theorizing about perception. Vision (for example) is not now treated as merely presenting the subject with a "sensuously given mosaic of color spots" (David Lewis's phrase, quoted at p. 2), the relevance of which to the scene before the eyes is obscure, but rather as "delivering an interpreted message" (p. 5) about our familiar three-dimensional environment. "Sensory experiences are not insulated inner events that must be decoded or diagnosed by us before they can be put to use, but rather inherently *meaningful* states with representational significance beyond themselves" (p. 19). And that emphasis on how sensory awareness purports to be of objects located in three-dimensional space fits naturally with the idea that our sensory systems are "problem solvers" (p. 5). In the case of vision, the fundamental task is what is often called "inverse optics": starting from the activity of receptors in the retina, the visual system attempts to extract the best hypothesis about the environment.

Of course, the problem the visual system tries to solve has no unique solution, in the sense that innumerable environmental configurations could be responsible for any given pattern of retinal stimulation. One of Matthen's examples is illumination and surface reflectance, which—simplifying matters somewhat—are jointly responsible for the light reaching the eye from an object. Following Matthen, let us add to the inverse optics picture the claim that color is reflectance. Since the light reaching the eye is the product of the illumination and reflectance, in essence the visual system has to solve a single equation with two unknowns. Yet the visual system somehow manages to disentangle the relative contributions of the illumination and reflectance, with the result that we see the colors of surfaces reasonably accurately. Exactly how the visual system solves this problem is disputed, but as far as research programmes in cognitive science go, this one is far from degenerating.

Reasons and Empty Persons: Mind, Metaphysics, and Morality Christian Coseru, 2023-02-22 Best known for his groundbreaking and influential work in Buddhist philosophy Mark Siderits is the pioneer of fusion or confluence philosophy a boldly systematic approach to doing philosophy premised on the idea that rational reconstruction of positions in one tradition in light of another can sometimes help address perennial problems and often lead to new and valuable insights Exemplifying the many virtues of the confluence approach this collection of essays covers all core areas of Buddhist philosophy as well as topics and disputes in contemporary Western philosophy relevant to its study They consider in particular the ways in which questions concerning personal identity figure in debates about agency cognition causality ontological foundations foundational truths and moral cultivation Most of these essays engage Siderits work directly building on his pathbreaking ideas and interpretations Many deal with issues that have become a common staple in philosophical engagements with traditions outside the West Their variety and breadth bear testimony to the legacy of Siderits impact in shaping the contemporary conversation in Buddhist philosophy and its reverberations in mainstream philosophy giving readers a clear sense of the remarkable scope of his work

A Pluralist's Guide to Solving Molyneux's Problem Brian Glenney, 2024-12-31 This book presents a novel pluralist strategy for answering Molyneux's 300 year old conundrum Would a person born blind but given sight identify a shape previously known only by their touch The author interweaves historical scholarship with contemporary philosophical work and empirical research on animal infant and adult human perception The author argues that we need a new approach to Molyneux's problem because we do not know what the problem is really about and it is untestable because a Molyneux subject cannot be physically realized He criticizes Molyneux's question for its simplistic taxonomy of the blind that groups significant individual differences into a singular ontology Research in the cognitive sciences confirms that various kinds of blindness can co occur such as ocular cortical and psychological blindness Therefore the author adopts an explanatory pluralism for answering Molyneux's problem which includes no yes and no answer answers according to the domain of inquiry being used This account provides a research based answer to a long standing problem using previously unheeded insights particularly from animal crossmodal perception studies to retell a more complex story of perception its levels of explanation and integration *A Pluralist's Guide to Solving Molyneux's Problem* will be of interest to researchers and advanced students working in comparative psychology epistemology history of philosophy philosophy of perception
