Hyndman,Frederick D. Day-Lewis,Kamini

Singha, 2013-04-30 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 171 Groundwater is a critical resource and the Principal source of drinking water for over 1.5 billion people. In 2001 the National Research Council cited as a grand challenge our need to understand the processes that control water movement in the subsurface. This volume faces that challenge in terms of data integration between complex multi-scale hydrologic processes and their links to other physical, chemical, and biological processes at multiple scales. Subsurface Hydrology Data Integration for Properties and Processes presents the current state of the science in four aspects: Approaches to hydrologic data integration; Data integration for characterization of hydrologic properties; Data integration for understanding hydrologic processes; Meta-analysis of current interpretations. Scientists and researchers in the field, the laboratory, and the classroom will find this work an important resource in advancing our understanding of subsurface water movement.

Advances in Hydrogeology Phoolendra K. Mishra, Kristopher L. Kuhlman, 2013-04-16 This book represents different types of progress in hydrogeology including conceptualization, changes, different approaches to simulating groundwater flow and transport, new hydrogeophysical methods. Each chapter extends or summarizes a recent development in hydrogeology with forward-looking statements regarding the challenges and strengths that are faced. While the title and scope is broad, there are several sub-themes that connect the chapters. Themes include theoretical advances in conceptualization and modeling of hydrogeologic problems. Conceptual advances are further tempered by insights arising from observations from both field and laboratory work.

Grand Challenges in Environmental Sciences National Research Council, Oversight Commission for the Committee on Grand Challenges in Environmental Sciences, Committee on Grand Challenges in Environmental Sciences, 2001-05-24 Scientists have long sought to unravel the fundamental mysteries of the land, life, water, and air that surround us. But as the consequences of humanity's impact on the planet become increasingly evident, governments are realizing the critical importance of understanding these environmental systems and investing billions of dollars in research to do so. To identify high-priority environmental science projects, Grand Challenges in Environmental Sciences explores the most important areas of research for the next generation. The book's goal is not to list the world's biggest environmental problems. Rather, it is to determine areas of opportunity that with a concerted investment could yield significant new findings. Nominations for environmental science's grand challenges were solicited from thousands of scientists worldwide. Based on their responses, eight major areas of focus were identified: areas that offer the potential for a major scientific breakthrough of practical importance to humankind and that are feasible if given major new funding. The book further pinpoints four areas for immediate action and investment.

Research Needs for High-Level Waste Stored in Tanks and Bins at U.S. Department of Energy Sites National Research Council, Division on Earth and Life Studies, Board on Radioactive Waste Management, Committee on Long-Term Research Needs for Radioactive High-Level Waste at Department of Energy Sites, 2001-10-05 The United States Department of Energy (DOE) has approximately 400 million liters (100 million gallons) of

liquid high level waste HLW stored in underground tanks and approximately 4 000 cubic meters of solid HLW stored in bins The current DOE estimate of the cost of converting these liquid and solid wastes into stable forms for shipment to a geological repository exceeds 50 billion to be spent over several decades DOE 2000 The Committee on Long Term Research Needs for Radioactive High Level Waste at Department of Energy Sites was appointed by the National Research Council NRC to advise the Environmental Management Science Program EMSP on a long term research agenda addressing the above problems related to HLW stored in tanks and bins at DOE sites Coal Waste Impoundments National Research Council, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Committee on Earth Resources, Committee on Coal Waste Impoundments, 2002-02-07 On October 11 2000 a breakthrough of Martin County Coal Corporation's coal waste impoundment released 250 million gallons of slurry in near Inez Kentucky The 72 acre surface impoundment for coal processing waste materials broke through into a nearby underground coal mine Although the spill caused no loss of human life environmental damage was significant and local water supplies were disrupted This incident prompted Congress to request the National Research Council to examine ways to reduce the potential for similar accidents in the future This book covers the engineering practices and standards for coal waste impoundments and ways to evaluate improve and monitor them the accuracy of mine maps and ways to improve surveying and mapping of mines and alternative technologies for coal slurry disposal and utilization The book contains advice for multiple audiences including the Mine Safety and Health Administration the Office of Surface Mining and other federal agencies state and local policymakers and regulators the coal industry and its consultants and scientists and engineers *Elements of Physical Hydrology* George M.
