Moon President George H W Bush stood atop the steps of the National Air and Space Museum in Washington D C and proposed a long range human exploration plan that included the successful construction of an orbital space station a permanent return to the Moon and a mission to Mars This enterprise became known as the Space Exploration Initiative SEI The president charged the newly reestablished National Space Council with providing concrete alternatives for meeting these objectives To provide overall focus for the new initiative Bush later set a thirty year goal for a crewed landing on Mars Within a few short years after this Kennedyesque announcement however the initiative had faded into history the victim of a flawed policy process and a political war fought on several different fronts The story of this failed initiative was a tale of organizational cultural and personal confrontation by key protagonists and critical battles Some commentators have argued that SEI was doomed to fail due primarily to the immense budgetary pressures facing the nation during the early 1990s The central thesis of Mars Wars The Rise and Fall of the Space Exploration Initiative suggests however that failure was not predetermined Instead it was the result of a deeply flawed decision making process that failed to develop or even consider policy options that may have been politically acceptable given the existing political environment
