Longevity: a Vedic Approach Raj Kumar, The correct judgement of longevity is highly complex but is equally important and sought after Knowing longevity is difficult even for gods said sage Parashar Any prediction made without considering it may make the prediction a laughing stock of both the astrologer and astrology The time span between birth and death of a native is called his longevity Longevity and death are not the same but are closely related However it is not yet clear what death is Our scriptures have at various places equated death with different types of Mrityu Tulya agonies which are different from physical death Again the destiny of each one of us is interlinked with our close kith and kin and our relationship with them is pre determined predestined and irrevocable Death is severing of final link of a native with them Hence a native s death must get corroborated confirmed in the horoscopes of his close relations An attempt is made in this book to address all such issues The book is a study of about 225 natives who had lived and died in different countries at different time at different age and of different causes applying known tools of astrology The book is an attempt to help clear some mist and enable to have a better judgement of longevity

Humanism in Surgery Jonathan McFarland, Susana Magalhaes, Jacek Mostwin, René Genadry, 2025-08-12

Medical Humanities and Narrative Medicine have been increasingly relevant in view of the challenges that new health technologies and the digital world pose to truly person centered healthcare By Narrative Medicine we understand the practice of healthcare with narrative skills that allow professionals to recognize the suffering of others and of themselves be able to interpret verbal and non verbal narratives of illness and be motivated to act in a way that respects the Person of the Patient and of the Professional Surgery like other medical specialties requires space for reflection and debate on the meaning of humanism and its impact on the quality of care This requirement is more pressing in this area because it has escaped inquiry by Medical Humanities and Narrative Medicine We believe that this is due to the nature of the surgical activity carried out in an enclosed place characterized by the use of sophisticated technologies including robotics and artificial intelligence and inaccessible to patients relatives In addition the patients own expectations about surgery reinforce the technological and highly specialized nature of this area often marked by the neglect of the relational context with clear prejudice to the parties involved and the activity itself Although this gap has been identified there has been no space for reflection on the humanization of care in surgery This book is therefore innovative precisely because it responds to the previously mentioned shortcomings offering its readers the opportunity to reflect on Humanism in Surgery

in mathematics galois cohomology is the study of the group cohomology of galois modules that is the application of homological algebra to modules for galois groups a galois group G associated to a field extension L/K acts in a natural way on some abelian groups for example those constructed directly from L but also through other galois representations that may be derived by more abstract means galois cohomology accounts for the way in which taking galois invariant elements fails
