Martens And Fishers Martes In Human Altered Environments:

Martens and Fishers (Martes) in Human-Altered Environments Daniel J. Harrison, Angela K. Fuller, Gilbert Proulx, 2004-10-21 Martens and Fishers Martes in Human Altered Environments An International Perspective examines the conditions where humans and martens are compatible and incompatible and promotes land use practices that allow Martes to be representatively distributed and viable All Martes have been documented to use forested habitats and 6 species excluding the stone marten are generally considered to require complex mid to late successional forests throughout much of their geographic ranges All species in the genus require complex horizontal and vertical structure to provide escape cover protection from predators habitat for their prey access to food resources and protection from the elements Martens and the fisher have high metabolic rates have large spatial requirements have high surface area to volume ratios for animals that often inhabit high latitudes and often require among the largest home range areas per unit body weight of any group of mammals Resulting from these unique life history characteristics this genus is particularly sensitive to human influences on their habitats including habitat loss stand scale simplification of forest structure via some forms of logging and landscape scale effects of habitat fragmentation Given their strong associations with structural complexity in forests martens and the fisher are often considered as useful barometers of forest health and have been used as ecological indicators flagship and umbrella species in different parts of the world Thus efforts to successfully conserve and manage martens and fishers are associated with the ecological fates of other forest dependent species and can greatly influence ecosystem integrity within forests that are increasingly shared among wildlife and humans We have made great strides in our fundamental understanding of how animals with these unique life history traits perceive and utilize habitats respond to habitat change and how their populations function and perform under different forms of human management and mismanagement This knowledge enhances our basic understanding of all species of Martes and will help us to achieve the goal of conserving viable populations and representative distributions of the world's Martes their habitats and associated ecological communities in our new millennium Martens and Fishers (Martes) in Human-Altered Environments Daniel J. Harrison, Angela K. Fuller, Gilbert Proulx, 2006-02-28 Martens and Fishers Martes in Human Altered Environments An International Perspective examines the conditions where humans and martens are compatible and incompatible and promotes land use practices that allow Martes to be representatively distributed and viable All Martes have been documented to use forested habitats and 6 species excluding the stone marten are generally considered to require complex mid to late successional forests throughout much of their geographic ranges All species in the genus require complex horizontal and vertical structure to provide escape cover protection from predators habitat for their prey access to food resources and protection from the elements Martens and the fisher have high metabolic rates have large spatial requirements have high surface area to volume ratios for animals that often inhabit high latitudes and often require among

the largest home range areas per unit body weight of any group of mammals Resulting from these unique life history characteristics this genus is particularly sensitive to human influences on their habitats including habitat loss stand scale simplification of forest structure via some forms of logging and landscape scale effects of habitat fragmentation Given their strong associations with structural complexity in forests martens and the fisher are often considered as useful barometers of forest health and have been used as ecological indicators flagship and umbrella species in different parts of the world Thus efforts to successfully conserve and manage martens and fishers are associated with the ecological fates of other forest dependent species and can greatly influence ecosystem integrity within forests that are increasingly shared among wildlife and humans We have made great strides in our fundamental understanding of how animals with these unique life history traits perceive and utilize habitats respond to habitat change and how their populations function and perform under different forms of human management and mismanagement This knowledge enhances our basic understanding of all species of Martes and will help us to achieve the goal of conserving viable populations and representative distributions of the world s Martes their habitats and associated ecological communities in our new millennium Martens and Fishers (Martes) in Human-Altered Environments Daniel J. Harrison, Angela K. and will help us to achieve the goal of conserving viable populations and representative distributions of the world's Martes their habitats and associated ecological communities in our new millennium Biology and Conservation of Martens, Sables, and Fishers Keith B. Aubry, William J. Zielinski, Martin G. Raphael, Gilbert Proulx, Steven W. Buskirk, 2012-08-28 Mammals in the genus Martes are mid sized carnivores of great importance to forest ecosystems This book the successor to Martens Sables and Fishers Biology and Conservation provides a scientific basis for management and conservation efforts designed to maintain or enhance the populations and habitats of Martes species throughout the world The twenty synthesis chapters contained in this book bring together the perspectives and expertise of 63 scientists from twelve countries and are organized by the five key themes of evolution and biogeography population biology and management habitat ecology and management research techniques and conservation Recent developments in research technologies such as modeling and genetics biological knowledge about pathogens and parasites and concerns about the potential effects of global warming on the distribution and status of Martes populations make new syntheses of these areas especially timely The volume provides an overview of what is known while clarifying initiatives for future research and conservation priorities and will be of interest to mammalogists resource managers applied ecologists and conservation biologists Carnivore Ecology and Conservation Luigi Boitani, Roger A. Powell, 2012-01-12 Animals that must hunt and kill for at least part of their living are inherently interesting to many people and the role that carnivores play in biological communities attract interest from ecologists and conservation biologists Conflicts with human activities stimulate continual debates about the management of carnivore populations and throughout the world people seek workable solutions for human carnivore coexistence This concise yet authoritative handbook describes research methods and techniques for the study and conservation of all terrestrial carnivore species Particular attention is paid to techniques for managing the human carnivore interface Descriptions of the latest methodologies are supported by references to case studies whilst dedicated boxes are used to illustrate how a technique is applied to a specific land cover type species or particular socio economic context The book describes the most recent advances in modelling the patterns of animal distributions movements and use of land cover types as well as including the most efficient methods to trap handle and mark carnivores Carnivores are biogeographically diverse and whilst extensive scientific research has investigated many aspects of carnivore biology not all species have been equally covered This book is unique in its intention to provide practical guidance for carrying out research and conservation of carnivores across all species and areas of the world Small Carnivores Emmanuel Do Linh San, Jun J. Sato, Jerrold L. Belant, Michael J. Somers, 2022-07-13 Small Carnivores Evolution Ecology Behaviour and Conservation This book focuses on the 232 species of the mammalian Order Carnivora with an average body mass 21 5 kg Small carnivores inhabit virtually all of the Earth s ecosystems adopting terrestrial semi fossorial semi arboreal or semi aquatic lifestyles. They occupy multiple trophic levels and therefore play important roles in the regulation of ecosystems such as natural pest control seed dispersal and nutrient

cycling In areas where humans have extirpated large carnivores small carnivores may become the dominant predators which may increase their abundance mesopredator release to the point that they can sometimes destabilize communities drive local extirpations and reduce overall biodiversity On the other hand one third of the world's small carnivores are threatened or near threatened with extinction This results from regionally burgeoning human populations industrial and agricultural activities causing habitat reduction destruction fragmentation and pollution Overexploitation persecution and the impacts of introduced predators competitors and pathogens have also negatively affected many small carnivore species Although small carnivores have been intensively studied over the past decades bibliometric studies showed that they have not received the same attention given to large carnivores Furthermore there is huge disparity in how research efforts on small carnivores have been distributed with some species intensively studied and others superficially or not at all This book aims at filling a gap in the scientific literature by elucidating the important roles of and documenting the latest knowledge on the world s small carnivores pThis is a book that has been needed for decades It is the first compendium of recent research on a group of mammals which has received almost no attention before the early 1970s This book covers a wide range of subdisciplines and techniques and should be considered a solid baseline for further research on this little known group of highly interesting mammals As our knowledge regarding how ecosystems function increases then the valuable role of small carnivores and the necessity for their conservation should be regarded as of paramount importance. The topics covered in this book should therefore be of great interest not only to academics and wildlife researchers but also to the interested layman Trapping Guide Janet Pesaturo, 2018-09-01 Using a specially made inexpensive and rugged heat detecting camera you can view wildlife up close Camera Trapping Guide gives you the trapping techniques and knowledge of animal behaviors so you can get the best possible photos and videos Includes 37 species common to the eastern U S Large and small mammals squirrels to bears deer and moose plus birds and even the American alligator are covered With photos and range maps each entry gives details on physical characteristics tracks and sign diet habitat and breeding Also included are specific camera trapping techniques pertinent to each animal You ll learn the characteristics of the various cameras where to place the camera and the camera settings to get best results and how to minimize impacts on the environment **Revision of the** Resource Management Plans of the Western Oregon Bureau of Land Management Districts ,2008 Application of Artificial Neural Networks in Geoinformatics Saro Lee, 2018-04-09 This book is a printed edition of the Special Issue Application of Artificial Neural Networks in Geoinformatics that was published in Applied Sciences Deschutes and Ochoco National Forests (N.F.) and Crooked River National Grassland, Invasive Plant Treatments, Deschutes, Jefferson, Crook, Wheeler, and Grant Counties, 2007 Sierra Nevada National Forest (N.F.), Sierra Nevada Forest Plan Amendment ,2000 Sierra Nevada Forest Plan Amendment ,2004 Fremont-Winema National Forests (N.F.), Invasive Plant Treatment .2011 Prospects for Resilience Eric W. Sanderson, William D. Solecki, John R. Waldman, Adam S.

Parris, 2016-11-17 Given the realities of climate change and sea level rise coastal cities around the world are struggling with questions of resilience Resilience at its core is about desirable states of the urban social ecological system and working to sustain those states in an uncertain and tumultuous future How do physical conditions ecological processes social objectives human politics and history shape the prospects for resilience Most books set out the answer This book sets out a process of grappling with holistic resilience from multiple perspectives drawing on the insights and experiences of more than fifty scholars and practitioners working together to make Jamaica Bay in New York City an example for the world Ranging from a framework for understanding resilience practice in urban watersheds to essential tools for research and practice Prospects for Resilience is filled with information and advice for scientists urban planners students and others who are working to create more resilient cities that work with not against nature Landscape-scale Conservation Planning Stephen C. Trombulak, Robert Baldwin, 2010-09-21 Hugh P Possingham Landscape scale conservation planning is coming of age In the last couple of decades conservation practitioners working at all levels of governance and all spatial scales have embraced the CARE principles of conservation planning Comprehensiveness Adequacy Representativeness and Efficiency Hundreds of papers have been written on this theme and several different kinds of software program have been developed and used around the world making conservation planning based on these principles global in its reach and influence Does this mean that all the science of conservation planning is over that the discovery phase has been replaced by an engineering phase as we move from defining the rules to implementing them in the landscape This book and the continuing growth in the literature suggest that the answer to this question is most definitely no All of applied conservation can be wrapped up into a single sentence what should be done the action in what place at what time using what mechanism and for what outcome the objective It all seems pretty simple what where when how and why However stating a problem does not mean it is easy to Biology and Conservation of Musteloids David Whyte Macdonald, Chris Newman, Lauren A. Harrington, 2017 solve This is the first specific coverage of musteloid conservation biology written and edited by world renowned specialists in the Cognitive Movement Ecology Eliezer Gurarie, Tal Avgar, 2024-02-09 At least since Darwin argued that the difference field in cognitive abilities between animals and humans is one of degree and not of kind the study of animal cognition has been an active and dynamic subfield of behavioral sciences It has however been based almost entirely on experimental studies of animals in captivity and belongs as a field more snugly in the realm of Psychology or Ethology with relatively little application to understanding the behavior of animals in the wild Movement Ecology in contrast is a more recent branch of Ecology devoted almost entirely to the analysis of animal movements in the wild Technological developments allow for animals to be tracked in the wild in ever increasing numbers precision and duration Movement ecology has to some extent chased the data reflecting the practical need to analyze and interpret those data Much of the most important developments of recent decades are devoted to dealing with the trickier aspects of the statistical analysis of movement data which in their

multidimensionality autocorrelation gappiness and measurement error and behavioral complexity pose no shortage of hairy statistical problems Science Findings, 2004 Mammals of Colorado, Second Edition David M. Armstrong, James P. Fitzgerald, Carron A.
