New Directions in Spectrophotometry A. G. Davis Philip, Donald S. Hayes, Saul J. Adelman, 1988 *Literature 1988, Part 2* Astronomisches Rechen-Institut, 2013-06-29 From the reviews Astronomy and Astrophysics Abstracts has appeared in semi annual volumes since 1969 and it has already become one of the fundamental publications in the fields of astronomy astrophysics and neighbouring sciences It is the most important English language abstracting journal in the mentioned branches The abstracts are classified under more than a hundred subject categories thus permitting a quick survey of the whole extended material The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences As such it represents a necessary ingredient of any astronomical library all over the world Space Science Reviews 1 Dividing the whole field plus related subjects into 108 categories each work is numbered and most are accompanied by brief abstracts Fairly comprehensive cross referencing links relevant papers to more than one category and exhaustive author and subject indices are to be found at the back making the catalogues easy to use The series appears to be so complete in its coverage and always less than a year out of date that I shall certainly have to make a little more space on those shelves for future volumes The Observatory Magazine 2 *New Directions in Research with Third-Generation Soft X-Ray Synchrotron Radiation Sources* A.S. Schlachter, F.J. Wuilleumier, 2012-12-06 Soft X rays are a powerful probe of matter They interact selectively with electrons in atoms and molecules and can be used to study atomic physics chemical reactions surfaces and solids and biological entities Over the past 20 years synchrotrons have emerged as powerful sources of soft X rays for experimental use A new third generation of synchrotron light sources is scheduled to start operation over the next few years beginning in 1993 These facilities are distinguished by their ultra low emittance electron beams and by their undulators precisely engineered magnetic devices that cause the electrons passing through them to produce highly coherent X rays and ultraviolet light of unprecedented spectral brightness This volume emphasizes third generation sources that produce light in the 10 eV 10 KeV energy range It describes potential applications ranging from the purely scientific to the commercially viable and includes chapters on the practical aspects of designing undulators and beam line optics Unique in its coverage the book is a vital addition to the library of any scientist who needs information on the world s most advanced imaging and spectroscopic techniques ABSTRACT This volume emphasizes the applications of new third generation synchrotron radiation sources that produce light in the ultraviolet and soft X ray range of the spectrum The unprecedented brightness of this light enables experiments to be conducted with greatly increased spatial and spectral resolution Scientists can exploit these properties for imaging and spectroscopic applications that until now were impossible or impractical Prominent researchers in the field describe these applications and others made possible by the light s pulsed time structure and polarization The volume also includes chapters on the practical aspects of designing undulators and beam line optics Automated Telescopes for Photometry and Imaging Saul J. Adelman, Robert J. Dukes, Carol J. Adelman, 1992
