Plastics have become increasingly important in the products used in our society ranging from housing to packaging transportation business machines and especially in medicine and health products Designing plastic parts for this wide range of uses has become a major activity for designers architects engineers and others who are concerned with product development Because plastics are unique materials with a broad range of proper ties they are adaptable to a variety of uses The uniqueness of plastics stems from their physical characteristics which are as different from metals glasses and ceramics as these materials are different from each other One major concern is the design of structures to take loads Metals as well as the other materials are assumed to respond elastically and to recover completely their original shape after the load is removed Based on this simple fact extensive litera ture on applied mechanics of materials has been developed to enable designers to predict accurately the performance of structures under load Many engineers depend on such texts as Timoshenko s *Strength of Materials* as a guide to the performance of structures Using this as a guide generations of engineers have designed economical and safe structural parts Unfortunately these design principles must be modified when designing with plastics since they do not respond elastically to stress and undergo permanent deformation with sus tained loading *Plastics Product Design* Paul F. Mastro,2016-03-28 *Plastics Product Design* Provides the reader with access to lessons learned in the author s 40 years of plastics product design experience Part 1 of the book provides the reader with an

introduction to plastics as a design material and a discussion of materials commonly in use today There is a discussion of a variety of processes available to the designer to make a part along with the design considerations each process will entail This section also includes a discussion of useful prototyping processes including advantages and disadvantages of each Next the book discusses general design considerations applicable to most plastics product designs In Part 2 of the book the author discusses elements of design of a number of generic plastic product types based on his more than 40 years of experience of product design and development for several companies with a variety of products This section includes discussions of structural components gears bearings hinges snap fits packaging pressure vessels and optical components This section also discusses the general considerations that apply to these applications as well as specific insights about each particular application There is also a chapter on the most important joining techniques Part 2 ends with a discussion of the general design process The book concludes with 3 appendices on thermal properties of selected generic materials properties of selected structural components and common abbreviations for plastic materials Audience This book is aimed at product designers and plastics application engineers who have had limited or no experience with plastics materials as well as a more experienced designer who is designing a part for a use process or an application that they are not familiar with

Plastics Products Design Handbook: Materials and components Edward Miller, *Transparent Plastics* Simone Jeska, 2007-10-05. Recent years have seen the construction of buildings made of plastic structures that are as attractive as they are unusual. After initial experiments in the 1970s plastic is currently experiencing a tremendous boom. Originally used for temporary structures like the BMW Pavilion in Frankfurt it is now employed in many permanent buildings as well including the recent Catholic church in Radebeul by Staib Behnisch. Prominent international avant garde architects such as Shigeru Ban and Herzog de Meuron frequently use transparent plastic for their structures. Transparent plastic seems ephemeral and thus captures the spirit of the times. Its various qualities between transparent and translucent make it possible to achieve fascinating effects with light and color. Projects presented include the Allianz Arena in Munich by Herzog de Meuron the Rocket Tower in Leicester by Grimshaw Partners the Paper Art Museum by Shigeru Ban in Shizuoka Japan and the public housing development Cit Manfeste in Mulhouse by Lacaton Vassal. Seit einigen Jahren entstehen ebenso attraktive wie ungewöhnliche Bauten aus Kunststoff. Nach ersten Versuchen in den 1970er Jahren erlebt der Baustoff derzeit einen ungeheuren Boom. Zunächst für temporäre Bauten wie dem BMW Pavillon in Frankfurt genutzt entstehen mittlerweile auch zahlreiche bleibende Gebäude wie kürzlich die Katholische Kirche von Staib Behnisch in Radebeul. Bekannte Architekten der internationalen Avantgarde wie Shigeru Ban oder Herzog de Meuron verwenden gerne transparenten Kunststoff für ihre Bauten. Das Material scheint ephemere transitorisch ohne es zu sein und trifft damit den Nerv der heutigen Zeit. Seine unterschiedlichen Qualitäten zwischen transparent und transluzent erlauben faszinierende Licht- und Farbeffekte. Zu den dargestellten Projekten gehören die Allianz Arena in München von Herzog de Meuron der Rocket Tower in Leicester von Grimshaw Partner das Papiermuseum von Shigeru Ban in Shizuoka Japan und der soziale Wohnungsbau der Cit Manfeste in Mulhouse von Lacaton Vassal.
