Kress, Gary W. Barrett, 2016-02-02 In the twentieth century scientists in the relatively new field of biology played an
important role in exposing the threats of environmental degradation loss of species diversity habitat fragmentation scarce
energy resources and human population growth In the essays found in A New Century of Biology some of the world s most
notable biologists consider how their discipline must evolve to address these problems in the twenty first century The next
one hundred years the contributors argue will likely be dominated by breakthroughs in evolutionary biology and systems
ecology by an increased need for scientists to integrate research teaching and service missions and by problem solving
ventures on greater spatial and temporal scales Because human activity and increased population will continue to have a
profound impact on the environment biologists must define an effective strategy for integrating the biological sciences with
global economics and human social structure The eleven contributors are leaders in the fields of ecology and evolution
morphology and development behavior microbiology ecosystem energetics and biogeochemistry biodiversity and
conservation biology and human sciences While acknowledging the real problems their discipline must address they offer an
optimistic agenda for the future *Bulletin of the American Society for Information Science* American Society for
