A Search for Environmental Ethics Mary Anglemyer, 1980 **Footprints on the Planet** Robert Cahn, 1978 *A Search for Environmental Ethics* Mary Anglemyer, 1980 **A search for environmental ethics** Mary Anglemyer, Catherine C. LeMaistre, Eleanor R. Seagraves, 1980 **Environmental Ethics** John Christopher Brenke, 1993 *A New Environmental Ethics* Holmes Rolston III, 2012-04-23

No one looking ahead at the middle of the last century could have foreseen the extent and the importance of the ensuing environmental crises. Now more than a decade into the next century, no one can ignore it. *A New Environmental Ethics: the Next Millennium for Life on Earth* offers clear, powerful, and oftentimes moving thoughts from one of the first and most respected philosophers to write on the environment. Rolston, an early and leading pioneer in studying the moral relationship between humans and the earth, surveys the full spectrum of approaches in the field of environmental ethics. This book, however, is not simply a judicious overview. Instead, it offers critical assessments of contemporary academic accounts and draws on a lifetime of research and experience to suggest an outlook for the future. As a result, this focused forward-looking analysis will be a necessary complement to any balanced textbook or anthology in environmental ethics and will teach its readers to be responsible global citizens and residents of their landscape, helping ensure that the future we have will be the one we wish for.

Environmental Ethics and Policy-Making Mikael Stenmark, 2017-03-02

Environmental issues raise crucial questions: What should we value? What is our place in nature? What kind of life should we live? How should we interact with other living things? Environmental management and policy making is ultimately based on answers to these and similar questions, but do we need a new ethics to be able to overcome the environmental crisis we face? This book addresses these important questions and explores the values that decision makers often presuppose in their environmental policy making. Examining the content of the ethics of sustainable development that the UN and the world's governments want us to embrace, this book examines alternatives to this kind of ethics and the differences in basic values that these make in practice. Offering a detailed analysis of the ethics that lie behind current policy making as it is expressed in documents such as Agenda 21 and the Rio Declaration, this unique contribution to the field of environmental studies shows how different environmental ethical theories support different goals of environmental management and generate different policies when it comes to population growth, agriculture, and preservation and management of wilderness areas and endangered species. Mikael Stenmark concludes that policy makers must take more seriously the value assumptions and conflicts connected to environmental issues and state explicitly on what values their own proposals and decisions are based and why these should be accepted. Those studying environmental issues or environmental philosophy will find this accessible text invaluable in presenting a clear understanding of environmental ethics and contemporary applications and policies.

Fittingness and Environmental Ethics Michael S. Northcott, Steven C. van den Heuvel, 2023-02-24 This volume focuses on fittingness as an ethical aesthetic idea and in particular examines how the concept is beneficial for environmental ethics It brings together an innovative set of contributions to argue that fittingness is a significant but under investigated facet of human ethical deliberation with both ethical and aesthetic dimensions In widely diverse matters from architecture to table

manners individuals and communities make decisions based on fittingness also expressed in related terms such as appropriateness prudence temperance and mutuality In the realm of environmental ethics fittingness denotes a relation between conscious embodied persons and their habitats and is of relevance to judgements about how humans shape and take up with the non human environment and hence to ethical decisions about the development and use of the environment and non human creatures As such fittingness can be of great benefit in reframing human relationships to the non human stimulating a way of living in the world that is fitting to the preservation of its fruitfulness goodness beauty and truth *The Routledge Companion to Environmental Ethics* Benjamin Hale, Andrew Light, Lydia Lawhon, 2022-07-29 Written for a wide range of readers in environmental science philosophy and policy oriented programs The Routledge Companion to Environmental Ethics is a landmark comprehensive reference work in this interdisciplinary field Not merely a review of theoretical approaches to the ethics of the environment the Companion focuses on specific environmental problems and other concrete issues Its 65 chapters all appearing in print here for the first time have been organized into the following eleven parts I Animals II Land III Water IV Climate V Energy and Extraction VI Cities VII Agriculture VIII Environmental Transformation IX Policy Frameworks and Response Measures X Regulatory Tools XI Advocacy and Activism The volume not only explains the nuances of important core philosophical positions but also cuts new pathways for the integration of important ethical and policy issues into environmental philosophy It will be of immense help to undergraduate students and other readers coming up to the field for the first time but also serve as a valuable resource for more advanced students as well as researchers who need a trusted resource that also offers fresh policy centered approaches Doing Environmental Ethics Robert Traer, 2009-02-10 Doing Environmental Ethics is a brief accessible applied ethics book offering an inclusive and practical way for an individual to personally address the world s ecological crisis Author Robert Traer builds on a commonsense understanding of doing what is right and being a good person and suggests how with a deeper sense of self and one s place in nature we can begin to change our carbon footprint To consider and understand public policies and personal environmental practices Traer draws on secular and religious perspectives as well as Eastern and Western traditions Doing Environmental Ethics devotes central attention to considerations of duty to other people species and ecosystems character personal traits and virtues relationships to people and the natural environment and rights of people to participate in land use decisions that affect them Discussion questions at the end of each chapter help readers clarify their reasoning and create action plans for change Doing Environmental Ethics demonstrates how valuable defining one s own philosophy about the environment is to living with greater ecological awareness and sense of personal responsibility Jacket

Environmental Ethics Kees Vromans, Rainer Paslack, Gamze Isildar, Rob de Vrind, Jürgen Simon, 2017-09-08 As the destructive consequences of environmental problems such as global warming water scarcity and resource and biodiversity destruction have been felt ever more heavily people are becoming more aware of the importance of and their responsibilities

towards environmental protection The causes of our problems are anthropogenic The number of people working in what might be termed environmental industries or with environmental responsibilities in their day to day work has mushroomed In many cases however individuals charged with protecting the environment have a set of empirical priorities what is done rather than moral priorities which consider what should be done The need to harmonize environmental knowledge with ethical behaviour and thus achieve behavioural change and the internalization of environmentally ethical values has never been more urgent This book developed as part of an EU programme to diffuse the application of environmental ethics to decision making on pollution control is a response to the need for a restatement of environmental ethics and for a code of behaviour and set of values that can be internalised and adopted to guide the actions by individuals at the sharp end of protecting the environment decision makers and environmental experts executives staff working in municipalities and public government organisations throughout the EU and Turkey It is nothing short of an ethical training manual that will guide environmental experts decision makers in making sound judgements and decisions and will act as a bridge between environmental knowledge and environmental behaviour The book will be essential reading for decision makers and experts working in local authorities and governmental organisations with responsibility for environmental protection for both graduate and postgraduate students in environment related disciplines and for vocational education teachers with a focus on the environment
