

# Do birds come from dinosaurs?

Evolution of birds is a debate topic in science. The most widespread theory says that they come from the Theropods, dinosaurs that walked on two legs. Fossils of specimens with feathers have been found, and the Archaeopteryx, which lived 150 millions of years ago is the oldest relative known. Covered with feathers, it had a primitive wing and it is believed it flew. However, it kept a good amount of dinosaur-like features.

## STRANGE BIRD

The Archaeopteryx lithographica is the most primitive bird known. It lived in the Jurassic, 150 years ago. It was carnivorous and about 1.5m in height, and 20 long, similar to a crow. Its features make it the closest model to observe the transition between dinosaurs and birds.

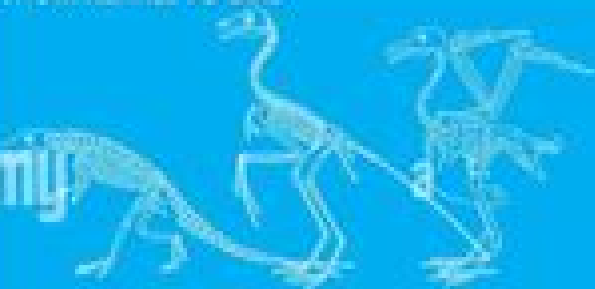

## OTHER THEORIES

A second theory says that birds came from the first vertebrates that they found some features with them. The third and last one claims that they came from the first invertebrates, along with the first vertebrates. It is a theory that is still being debated.

**ARCHAEOPTERYX**  
The first bird is the Archaeopteryx, the first modern bird, and it had a set of very strong teeth in both jaws.

**TEETH**  
Presence of teeth in the body, typical of reptiles and dinosaurs.

**2 ARCHAEOPTERYX**

**3 BIRD**  
From the Cretaceous period

**FOSSIL EVIDENCE**  
The Archaeopteryx has the characteristic of a dinosaur, while it is covered with feathers and the wings are visible.

**FOSSIL**  
The first is the Archaeopteryx, the first modern bird, and it had a set of very strong teeth in both jaws.

## THE FOSSIL

There are several fossil specimens found between 1868 and 1869. The first was found in Bavaria, Germany, and very important because it was the first fossil of the ancestor of "The Birds of Species" by Charles Darwin. It is a fossil in which the search for "missing links" is evolution-based evidence.

**Beyond The Stars: Our Origins And The Search For Life In The Universe** Paolo Saraceno, 2012-07-17 What is the origin of the universe? Are we alone in the Universe? Using clear and plain language, the author explores these two interesting scientific/philosophical themes with a broad range of studies including astronomy, cosmology, chemistry, biology, geology, and planet science. The first part discusses the origins of everything from the Big Bang to humankind. It follows the long course of evolution from original matter to the formation of more complex structures from the furthest galaxies to the nearest stars, from planets to organic molecules from the first and most elementary forms of life through to the reptiles, the dinosaurs, and the advent of man. The second part traces the history of the Earth and evaluates the risks of extinction in the future as predicted by scientists. Is the Earth the only habitable planet in the Universe? This question initiates the discussion on the importance of the Earth's position in the solar system and the significance of our geologically alive planet. The final part is dedicated to the search for extraterrestrial beings with identifiable life forms. It also describes attempts for searching from the past to the near future. This remarkable book provides the best answers we have to the epic questions about us and our place in the universe.

**The Origin and Evolution of Birds** Alan Feduccia, Professor Alan Feduccia, 1999-01-01 An exploration of all that is known about the origin of birds and of avian flight. **Origins of the Higher Groups of Tetrapods** Hans-Peter Schultze, Linda Trueb, 2018-10-18 This edited volume explores the various views on the origins of tetrapods: amphibians, reptiles, birds, and mammals. Views that agree or differ depending in part on how certain fossil animals are classified and which methodology is used for classification. Eighteen chapters by an international group of paleontologists and neontologists here present current hypotheses, emphasizing the kinds of data needed to answer controversial questions as well as the variety of solutions that emerge from different analyses of the same data set. The book is arranged in five sections, each of which contains an overview essay that either describes the development of various schools of thought regarding the

origin of the tetrapod group in question or critically summarizes the arguments presented in the section The first section addresses the origins of tetrapods as a group focusing on lobe finned fishes and early tetrapods Next is a section dealing with amphibians followed by one on reptiles The fourth section concerns avian origins and the final section treats the origins and early diversification of mammals With an overall goal of stimulating critical evaluation by the reader rather than providing unequivocal answers this volume will be of particular interest to vertebrate paleontologists evolutionary morphologists and ichthyological herpetological avian and mammalian systematists      **In Search of the Common Good** Jack E.
