Search Games

Eugene Kagan, Irad Ben-Gal

Search Games:

Search Games Gal,1980-11-27 **Search Games** **The Theory of Search Games and Rendezvous** Steve

Alpern, Shmuel Gal, 2006-04-10 Search Theory is one of the original disciplines within the field of Operations Research. It deals with the problem faced by a Searcher who wishes to minimize the time required to find a hidden object or target. The Searcher chooses a path in the search space and finds the target when he is sufficiently close to it. Traditionally the target is assumed to have no motives of its own regarding when it is found; it is simply stationary and hidden according to a known distribution, e.g., oil or its motion is determined stochastically by known rules, e.g., a fox in a forest. The problems dealt with in this book assume on the contrary that the target is an independent player of equal status to the Searcher who cares about when he is found. We consider two possible motives of the target and divide the book accordingly. Book I considers the zero-sum game that results when the target, here called the Hider, does not want to be found. Such problems have been called Search Games with the zero-sum qualifier understood. Book II considers the opposite motive of the target, namely that he wants to be found. In this case the Searcher and the Hider can be thought of as a team of agents simply called Player I and Player II with identical aims, and the coordination problem they jointly face is called the Rendezvous Search Problem. **Search**

Games and Other Applications of Game Theory Andrey Garnaev, 2012-12-06 This book is on applications of game theory. The title of this book is not Game Theory and its Applications because it does not construct a general theory for considered games. The book contains a lot of examples of application of game theory together with the background of those games considered and a list of unsolved problems. Also we consider only the game where the optimal strategies of the players are found in closed form. This book is an attempt to carry on the approach developed in nice books Search Games by Gal and Geometric Games and their Applications by Ruckle. The first chapter of this book supplies the required definitions and theorems from game theory. The second chapter deals with discrete search games where both players act simultaneously: the games of protection of a channel from infiltration of a submarine, the submarine versus helicopter game, the matrix search games, and others. The third chapter considers the game where the players allocate their continuous efforts. In these games players face up an alternative: either not to come into contest if the cost of efforts seems too high or come into it. In the last case the players have to decide how much resources they can afford to spend. The allocation models of search, antiballistic protection, and marketing are investigated. **Search Theory** Chudnovsky, 1988-09-26 On the solution of an optimal search problem with an exponential detection function. Covers one and two-sided detection problems by furnishing continuous and discrete-time strategies. Examines two-sided search strategies with solutions in hide-and-seek games in many discrete and continuous bounded.

Advances in Dynamic Games Michèle Breton, Krzysztof Szajowski, 2010-11-18 This book focuses on various aspects of dynamic game theory, presenting state-of-the-art research and serving as a testament to the vitality and growth of the field of dynamic games and their applications. The selected contributions written by experts in their respective

disciplines are outgrowths of presentations originally given at the 13th International Symposium of Dynamic Games and Applications held in Wroc aw The book covers a variety of topics ranging from theoretical developments in game theory and algorithmic methods to applications examples and analysis in fields as varied as environmental management finance and economics engineering guidance and control and social interaction *Search Theory* Steve Alpern,Robbert Fokkink,Leszek Gąsieniec,Roy Lindelauf,V.S. Subrahmanian,2014-07-08 Search games and rendezvous problems have received growing attention in computer science within the past few years Rendezvous problems emerge naturally for instance to optimize performance and convergence of mobile robots This gives a new algorithmic point of view to the theory Furthermore modern topics such as the spreading of gossip or disease in social networks have lead to new challenging problems in search and rendezvous *Search Theory A Game Theoretic Perspective* introduces the first integrated approach to Search and Rendezvous from the perspectives of biologists computer scientists and mathematicians This contributed volume covers a wide range of topics including rendezvous problems and solutions rendezvous on graphs search games on biology mobility in governed social networks search and security and more Most chapters also include case studies or a survey in addition to a chapter on the future direction of Search and Rendezvous research This book targets researchers and practitioners working in computer science mathematics and biology as a reference book Advanced level students focused on these fields will also find this book valuable as a secondary text book or reference **Advances in Dynamic Games** Pierre Cardaliaguet,Ross

Cressman,2012-09-13 This book focuses on various aspects of dynamic game theory presenting state of the art research and serving as a testament to the vitality and growth of the field of dynamic games and their applications Its contributions written by experts in their respective disciplines are outgrowths of presentations originally given at the 14th International Symposium of Dynamic Games and Applications held in Banff *Advances in Dynamic Games* covers a variety of topics ranging from evolutionary games theoretical developments in game theory and algorithmic methods to applications examples and analysis in fields as varied as mathematical biology environmental management finance and economics engineering guidance and control and social interaction Featured throughout are valuable tools and resources for researchers practitioners and graduate students interested in dynamic games and their applications to mathematics engineering economics and management science

Two-Person Zero-Sum Games Alan Washburn,2013-11-29 Two person zero sum game theory deals with situations that are perfectly competitive there are exactly two decision makers for whom there is no possibility of cooperation or compromise It is the most fundamental part of game theory and the part most commonly applied There are diverse applications to military battles sports parlor games economics and politics The theory was born in World War II and has by now matured into a significant and tractable body of knowledge about competitive decision making The advent of modern powerful computers has enabled the solution of many games that were once beyond computational reach *Two Person Zero Sum Games* 4th Ed offers an up to date introduction to the subject especially its computational aspects Any finite game

can be solved by the brute force method of enumerating all possible strategies and then applying linear programming The trouble is that many interesting games have far too many strategies to enumerate even with the aid of computers After introducing ideas terminology and the brute force method in the initial chapters the rest of the book is devoted to classes of games that can be solved without enumerating every strategy Numerous examples are given as well as an extensive set of exercises Many of the exercises are keyed to sheets of an included Excel workbook that can be freely downloaded from the SpringerExtras website This new edition can be used as either a reference book or as a textbook

Advances in Dynamic Games David M. Ramsey, Jérôme Renault, 2020-11-09 This contributed volume collects talks originally given at the 18th International Symposium on Dynamic Games and Applications held in Grenoble France from July 9 12 2018 Chapters present state of the art research in the field of dynamic games and are written by leading experts in this active area Featuring a broad overview of recent advances as well as a wide range of applications this book is organized into four sections games of conflict evolutionary games economic games and games involving common interest Within these sections specific topics covered include Pursuit evasion games Partnership formation games Replicator dynamics Load balancing congestion games Equilibrium coalition structures *Advances in Dynamic Games* will be of particular interest to researchers and doctoral students studying game theory

Search and Foraging Eugene Kagan, Irad Ben-Gal, 2015-06-23 Since the start of modern computing the studies of living organisms have inspired the progress in developing computers and intelligent machines In particular the methods of search and foraging are the benchmark problems for robotics and multi agent systems The highly developed theory of search and screening involves optimal search plans that are

Advances in Dynamic Games and Their Applications Pierre Bernhard, Vladimir Gaitsgory, Odile Pourtallier, 2009-04-20 This book presents current advances in the theory of dynamic games and their applications in several disciplines The selected contributions cover a variety of topics ranging from purely theoretical developments in game theory to numerical analysis of various dynamic games and then progressing to applications of dynamic games in economics finance and energy supply Thematically organized into eight parts the book covers key topics in these main areas theoretical developments in general dynamic and differential games pursuit evasion games numerical approaches to dynamic and differential games applications of dynamic games in economics and option pricing search games evolutionary games stopping games and stochastic games and large neighborhood games A unified collection of state of the art advances in theoretical and numerical analysis of dynamic games and their applications the work is suitable for researchers practitioners and graduate students in applied mathematics engineering economics as well as environmental and management sciences

An Invitation to Pursuit-Evasion Games and Graph Theory Anthony Bonato, 2022-06-16 Graphs measure interactions between objects such as friendship links on Twitter transactions between Bitcoin users and the flow of energy in a food chain While graphs statically represent interacting systems they may also be used to model dynamic interactions For example imagine an invisible evader loose on a graph leaving only behind

breadcrumb clues to their whereabouts You set out with pursuers of your own seeking out the evader's location Would you be able to detect their location If so then how many resources are needed for detection and how fast can that happen These basic seeming questions point towards the broad conceptual framework of pursuit evasion games played on graphs Central to pursuit evasion games on graphs is the idea of optimizing certain parameters whether they are the cop number burning number or localization number for example This book would be excellent for a second course in graph theory at the undergraduate or graduate level It surveys different areas in graph searching and highlights many fascinating topics intersecting classical graph theory geometry and combinatorial designs Each chapter ends with approximately twenty exercises and five larger scale projects

Frontiers in Games and Dynamic Games David Yeung, Shravan Luckraz, Chee Kian Leong, 2020-06-08 This contributed volume presents the state of the art of games and dynamic games featuring several chapters based on plenary sessions at the ISDG China Chapter Conference on Dynamic Games and Game Theoretic Analysis which was held from August 3-5 2017 at the Ningbo campus of the University of Nottingham China The chapters in this volume will provide readers with paths to further research serving as a testimony to the vitality of the field Experts cover a range of theory and applications related to games and dynamic games with topics including Dynamically stable cooperative provision of public goods under non transferable utility Strongly time consistent solutions in cooperative dynamic games Incentive Stackelberg games for stochastic systems Static and inverse Stackelberg games in political economy Cournot and Bertrand competition on symmetric R-D networks Numerical Nash equilibria using curvilinear multistart algorithm Markov chain approximation numerical scheme for infinite horizon mean field games *Frontiers in Games and Dynamic Games* will appeal to an interdisciplinary audience of researchers practitioners and graduate students interested in games and dynamic games
