Photographic Guide to the Sea and Shore Life of Britain and North-west Europe Ray Gibson, Benedict Hextall, Alex Rogers, 2001 This photographic guide to sea shore animals and plants represents a completely new approach to field guides It is aimed at those who wish to find and identify organisms encountered on the sea shore or immediately offshore quickly and easily while promoting their conservation Uniquely each species is illustrated by a photograph and in most cases accompanied by a line drawing that emphasises the critical features for identification and a map to show the distribution of the species in North West Europe The text itself deliberately focuses on features that complement the photographs and facilitate identification non destructively where for example burrowing worms can only be identified by digging them up and therefore killing them only the cast the part usually seen is shown Stress is laid on the importance of exploiting all available information for locating and identifying each species if two species have identical appearance they are described separately and behavioural geographical or seasonal features that distinguish them are described in the text There is no other guide to sea shore organisms like this one those available are either less comprehensive or less well illustrated It will appeal to beachcombers of all levels from families to students and professionals as well to divers and those visiting the proliferating numbers of commercially run marine aquaria that are open to the public

Sea Currents in Nineteenth-Century Art, Science and Culture Kathleen Davidson, Molly Duggins, 2023-03-09 How did scientists, artists, designers, manufacturers and amateur enthusiasts experience and value the sea and its products? Examining the commoditization of the ocean world during the nineteenth century, this book demonstrates how the transaction of oceanic objects inspired a multifaceted material discourse stemming from scientific exploration, colonial expansion, industrialization and the rise of middle class leisure. From the seashore to the seabed, marine organisms and environments made tangible through processing and representational technologies captivated practitioners and audiences. Combining essays and case studies by scholars, curators and scientists, *Sea Currents* investigates the collecting and display, illustration and ornamentation and trade and consumption of marine flora and fauna, analysing their material, aesthetic and commercial dimensions. Traversing global art history, the history of science, empire studies, anthropology, ecocriticism and material culture, this book surveys the currency of marine matter embedded in the economies and ecologies of a modernizing ocean world.
