Algebraic Art Andrea K. Henderson, 2018-04-05 Algebraic Art explores the invention of a peculiarly Victorian account of the nature and value of aesthetic form and it traces that account to a surprising source mathematics The nineteenth century was a moment of extraordinary mathematical innovation witnessing the development of non Euclidean geometry the revaluation of symbolic algebra and the importation of mathematical language into philosophy All these innovations sprang

from a reconception of mathematics as a formal rather than a referential practice as a means for describing relationships rather than quantities For Victorian mathematicians the value of a claim lay not in its capacity to describe the world but its internal coherence This concern with formal structure produced a striking convergence between mathematics and aesthetics geometers wrote fables logicians reconceived symbolism and physicists described reality as consisting of beautiful patterns Artists meanwhile drawing upon the cultural prestige of mathematics conceived their work as a science of form whether as lines in a painting twinned characters in a novel or wavelike stress patterns in a poem Avant garde photographs and paintings fantastical novels like Flatland and Lewis Carroll s children s books and experimental poetry by Swinburne Rossetti and Patmore created worlds governed by a rigorous internal logic even as they were pointedly unconcerned with reference or realist protocols Algebraic Art shows that works we tend to regard as outliers to mainstream Victorian culture were expressions of a mathematical formalism that was central to Victorian knowledge production and that continues to shape our understanding of the significance of form
