Magnetic Resonance Imaging Of The Pediatric Brain:

Magnetic Resonance Imaging of the Pediatric Brain G. Salamon, C. Raynaud, J. Regis, Presents a series of MRI sections parallel to the orbito meatal plane in children from birth to 16 years of age emphasizing the constancy of the brain stem and primitive brain during brain development from birth onward the important development of telencephalon characterized by the deepening of sulci and the growth of the cerebral cortex surface and the different stages of the white matter myelinization Provides imaging specialists neurophysiologists and pediatricians with a means of recognizing brain structures whatever the age of the child and increasing the accuracy of interpreting tomographic brain images obtained in pediatrics Annotation copyrighted by Book News Inc Portland OR

Magnetic Resonance Imaging of the Pediatric Brain Georges Salamon, 1990 Presents a series of MRI sections parallel to the orbito meatal plane in children from birth to 16 years of age emphasizing the constancy of the brain stem and primitive brain during brain development from birth onward the important development of telencephalon characterized by the deepening of sulci and the growth of the cerebral cortex surface and the different stages of the white matter myelinization Provides imaging specialists neurophysiologists and pediatricians with a means of recognizing brain structures whatever the age of the child and increasing the accuracy of interpreting tomographic brain images obtained in pediatrics Annotation copyrighted by Book News Inc Portland OR

MR Spectroscopy of Pediatric Brain Disorders

Stefan Blüml, Ashok Panigrahy, 2012-12-02 Magnetic resonance spectroscopy MRS is a modality available on most clinical MR scanners and readily integrated with standard MR imaging MRI For the brain in particular MRS has been a powerful research tool providing additional clinically relevant information for several disease families such as brain tumors metabolic disorders and systemic diseases The most widely available MRS method proton ^1H hydrogen spectroscopy is FDA approved for general use in the US and can be ordered by clinicians for patient studies if indicated There are several books available that describe applications of MRS in adults However to the best of our knowledge there is currently no book available that focuses exclusively on applications in pediatrics MR spectroscopy in the pediatric population is different from adults for two main reasons Particularly in the newborn phase the brain undergoes biochemical maturation with dramatic changes of the normal biochemical fingerprint Secondly brain diseases in the pediatric population are different from adult disorders For example brain tumors which are mostly gliomas in the adults often originate from different cell types and are also more diverse even within the same type and grade of tumor This diversity of diseases and its implications for MR spectroscopy has not been addressed sufficiently in the literature we believe The target audience for MR Spectroscopy of Pediatric Brain Disorders are thus both clinicians and researchers involved with pediatric brain disorders This includes radiologists neurologists neurooncologists neurosurgeons and more broadly the neuroscience and neurobiology community This book will provide the necessary background information to understand the basics of MR spectroscopy This will be followed by a detailed discussion of the normal biochemical maturation which will highlight the metabolic differences between the pediatric and adult brain Thereafter in SECTION I individual chapters will address various pediatric brain disease families Of particular importance for pediatrics are case studies For that reason SECTION II will contain a large number of case studies This will be particularly important for clinicians who may want to see examples of MRS for various conditions A standardized format will be used for case reports that allow the reader to quickly understand the history of each case presented and the significance of the findings The case reports will also include information from other imaging modalities to point out any added value of MRS in addition to conventional studies and clinical information This section is necessary because the format of providing more complete information about individual patients is not practical for the chapters in SECTION I

Measuring Resting Cerebral Perfusion using Magnetic Resonance Imaging (MRI) James Duffin,Alex Bhogal,2024-07-12 The acquisition of resting cerebral perfusion measures using magnetic resonance imaging MRI is one of the assessments of cerebrovascular health used to discern how well patients are coping with anatomical changes such as stenosis and other factors impacting the supply of blood flow to the brain Perfusion measures may be obtained using several MRI based techniques including arterial spin labeling ASL and dynamic contrast enhanced methods that rely on injected contrast agents such as gadolinium Recently hypoxia induced changes in deoxyhemoglobin have been used as a non invasive contrast agent measuring the resulting changes in blood oxygen dependent BOLD signals with MRI With each approach the means through which voxel wise cerebral perfusion information is derived differs leading to the development a variety of analysis methods in recent studies This Research Topic is intended to attract manuscripts that advance the use of resting cerebral perfusion measures in clinical assessments of cerebrovascular health In pursuit of this aim a better understanding of several aspects are needed
