Powering the Low-Carbon Economy: The Once and Future Roles of Renewable Energy and Natural Gas Saya Kitasei, 2010 Natural gas provides a natural complement to variable renewable energy sources such as

wind and solar power It is the cleanest fossil fuel emitting less than half the carbon dioxide and a fraction of the smog forming pollutants that coal power plants do Moreover it can be used in a variety of efficient flexible and scalable generating technologies enabling it to back up wind and solar generation on a range of time and geographic scales If new supplies can be produced responsibly natural gas can deliver immediate reductions in carbon emissions from the power sector Methane the main component of natural gas already is being captured from landfills and other renewable sources which can contribute a growing share of natural gas supplies in the decades ahead As renewable energy and natural gas become more economical their share in global power generation markets is increasing at the expense of coal Working together renewable energy and natural gas can facilitate a rapid decarbonization of the power sector and provide the foundation for a low carbon energy future starting now from back cover

Collaborative Advantage Jonas Nahm,2021 Collaborative Advantage offers a bold new take on the drivers and consequences of globalization both for innovation in renewable energy industries and domestic politics In an era of rapid international economic integration how do countries interact innovate and compete in industries like energy that are fundamental to national interests In Collaborative Advantage Jonas Nahm examines the development of the wind and solar industries two historically important sectors that have long been the target of ambitious public policy As wind and solar grew from cottage industries into lucrative global sectors of geopolitical importance China Germany and the United States each developed distinct constellations of firms with starkly different technical capabilities The book shows that globalization itself has reinforced such distinct national patterns of industrial specialization Economically globalization has allowed domestic firms to specialize in specific activities because of new opportunities to collaborate with firms from abroad Politically new possibilities for specialization have allowed firms to repurpose existing domestic institutions for application in new industries Against the backdrop of policy efforts that have generally failed to grasp the cross national nature of innovation the book offers a novel explanation for both the causes of changes in the global organization of innovation and their impact on domestic politics As interdependence in global supply chains has again come under fire in the wake of the Covid 19 pandemic Collaborative Advantage challenges the notion that globalization is primarily about competition between nations highlighting instead the central role of international collaboration in the global economy particularly in clean energy industries critical to solving the climate crisis
