Mathematical Methods In Theoretic Vol 8b:

Mathematical Methods in Scattering Theory and Biomedical Engineering Dimitrios Ioannou Fotiadis, Christos Massalas, 2006 This volume comprises the papers presented at the Seventh International Workshop on Scattering Theory and Biomedical Engineering focusing on the hottest topics in scattering theory and biomedical technology All the contributions are state of the art and have been fully reviewed The authors are recognized as being eminent both in their field and in the science community *Mathematical Methods In Electromagnetism: Linear Theory And Applications* Michel

Cessenat, 1996-07-13 This book provides the reader with basic tools to solve problems of electromagnetism in their natural functional frameworks thanks to modern mathematical methods integral surface methods and also semigroups variational methods etc well adapted to a numerical approach As examples of applications of these tools and concepts we solve several fundamental problems of electromagnetism stationary or time dependent scattering of an incident wave by an obstacle bounded or not by gratings wave propagation in a waveguide with junctions and cascades We hope that mathematical notions will allow a better understanding of modelization in electromagnetism and emphasize the essential features related to the geometry and nature of materials *Mathematical Methods of Game and Economic Theory* Jean-Pierre

Aubin, 2007-01-01 Mathematical economics and game theory approached with the fundamental mathematical toolbox of nonlinear functional analysis are the central themes of this text Both optimization and equilibrium theories are covered in full detail The book's central application is the fundamental economic problem of allocating scarce resources among competing agents which leads to considerations of the interrelated applications in game theory and the theory of optimization Mathematicians mathematical economists and operations research specialists will find that it provides a solid foundation in nonlinear functional analysis This text begins by developing linear and convex analysis in the context of optimization theory The treatment includes results on the existence and stability of solutions to optimization problems as well as an introduction to duality theory The second part explores a number of topics in game theory and mathematical economics including two person games which provide the framework to study theorems of nonlinear analysis The text concludes with an introduction to non linear analysis and optimal control theory including an array of fixed point and subjectivity theorems that offer powerful tools in proving existence theorems **Information Theory** Bertrand Duplantier, Vincent Rivasseau, 2021-07-19

This eighteenth volume in the Poincar Seminar Series provides a thorough description of Information Theory and some of its most active areas in particular its relation to thermodynamics at the nanoscale and the Maxwell Demon and the emergence of quantum computation and of its counterpart quantum verification It also includes two introductory tutorials one on the fundamental relation between thermodynamics and information theory and a primer on Shannon's entropy and information theory The book offers a unique and manifold perspective on recent mathematical and physical developments in this field

The Theory of Categorical Conversion Dompere, Kofi Kissi, 2017-09-17 The Theory of Categorical Conversion is advanced by

Professor Kofi Kissi Dompere as mathematical philosophical and game theoretic foundations to solve the problem of socio natural transformation as governed by some internal process in relation to Marx Schumpeter and Nkrumah Dompere s methodology is based on the Africentric principles of opposites made up of actual potential polarity negative positive duality with relational continuum and unity under cost benefit rationality and Asantofi Anoma principle supported by fuzzy paradigm of thought Socio natural transformations are seen in terms of game theories in a fuzzy stochastic space admitting of defective deceptive information structures in quality quantity space within the subjective objective duality The main premise of the monograph is that there exists a set of necessary and sufficient conditions for internal self transformation The necessary conditions are made up of categorial moments and categorial transfer functions forming the domain of control instrumentation in creating the sufficient conditions for categorial conversion processes Dompere presents an important methodological framework for the study and construction of the theories of socioeconomic development and political change as well as info dynamics connecting knowledge sciences innovation and engineering to the space of knowing under qualitative quantitative transformational dynamics with defective deceptive information structures in the games for power and dominance by duals and poles in conflicts The necessary conditions of socio natural transformation are internally derived based on the relational structure of matter energy information activities within the dynamics of qualitative dispositions of dualities of actual potential polarities The theory consists of category formation showing ontological epistemological categories and categorial dynamics shows elemental conversions of categorial varieties in a continuum The logical tools and the paradigm of thought for the theoretical development of Nkrumah s framework involve self excitement self correction and self control systems induced by internal contradictions The set of necessary conditions constitutes the natural necessity that constrains cognitive freedom in socio natural transformations Had this conceptual system been familiar to economists and social scientists the construct of the theories of socioeconomic development and transformations would have been increasingly successful

A Method for Recognizing Fatigue Driving Based on Dempster-Shafer Theory and Fuzzy Neural Network WenBo Zhu, HuichengYang,Yi Jin,Bingyou Liu, This study proposes a method based on Dempster Shafer theory DST and fuzzy neural network FNN to improve the reliability of recognizing fatigue driving This method measures driving states using multifeature fusion First FNN is introduced to obtain the basic probability assignment BPA of each piece of evidence given the lack of a general solution to the definition of BPA function Second a modified algorithm that revises conflict evidence is proposed to reduce unreasonable fusion results when unreliable information exists
