Empirical Model Building James R. Thompson, 2009-09-25 A hands on approach to the basic principles of empirical model building Includes a series of real world statistical problems illustrating modeling skills and techniques Covers models of growth and decay systems where competition and interaction add to the complexity of the model and discusses both classical and nonclassical data analysis methods *Stochastic Modeling in Range Management* Amitrajeet A. Batabyal, 2004 Although rangelands are one of the most important ecological economic systems on our planet researchers thus far have paid scant attention to the study of range management from a theoretical perspective As such this book provides a systematic approach to the theoretical study of range management under uncertainty In particular the book demonstrates how the theory of stochastic processes and the techniques of stochastic modelling can be used to construct and analyse theoretical models of jointly determined rangelands and thereby shed light on the task of range management Because specialised grazing systems involving the rotation of animals between pastures have been a major focus of range managers since the 1950s this book pays considerable attention to questions that arise when specialised grazing systems such as short duration grazing are used to manage rangelands Specific issues that are analysed in this book include the optimal number of paddocks in short duration grazing the steady state distribution of animals in short duration grazing Also the effect of potential irreversibilities the choice between the stocking rate and time herding in ranch operations and the role of time in range management is discussed **Computational Intelligence and Informatics** Imre J. Rudas, János Fodor, 2010-10-08 The

International Symposium of Hungarian Researchers on Computational Intelligence and Informatics celebrated its 10 edition in 2009 This volume contains a careful selection of papers that are based on and are extensions of corresponding lectures presented at the jubilee conference This annual Symposium was launched by Budapest Tech previously Budapest Polytechnic and by the Hungarian Fuzzy Association in 2000 with the aim to bring together Hungarian speaking researchers working on computational intelligence and related topics from all over the world but with special emphasis on the Central European Region The Symposium of the 10 jubilee anniversary contained 70 reviewed papers The growing interests the

enthusiasm of the participants have proved that the Symposium has become an internationally recognized scientific event providing a good platform for the annual meeting of Hungarian researchers The main subject area called Computational Intelligence includes diverse topics Therefore we offer snapshots rather than a full coverage of a small particular subject to the interested reader This principle is also supported by the common national root of the authors The book begins with Information Systems and Communication This part contains papers on graphs of grammars software and hardware solution for Mojette transformation statistical intrusion detection congestion forecast and 3D based internet communication and control
