Mathematical Vistas From A Room With Many Windows:

Mathematical vistas Peter John Hilton, Derek Allan Holton, Jean Pedersen, 2002 **Mathematical Vistas** Peter Hilton, Derek Holton, Jean Pedersen, 2002-01-08 This book collects nine related mathematical essays which will intrigue and inform From the reviews The authors put their writing where their talents are and students get to see just how alive mathematics is there is much to commend the book It contains plenty of interesting mathematics often going in unusual directions I like the diagrams the authors have chosen mathematics that involves especially pretty ones THE MATHEMATICAL ASSOCIATION OF AMERICA Mathematical Vistas: From A Room With Many Windows Hilton, 2009-12-01 Mathematical Vistas Peter Hilton, Derek Holton, Jean Pedersen, 2013-06-29 Focusing Your Attention We have called this book Mathematical Vistas because we have already published a companion book Mathematical Reflections in the same series 1 indeed the two books are dedicated to the same principal purpose to stimulate the interest of bright people in mathematics It is not our intention in writing this book to make the earlier book a prerequisite but it is of course natural that this book should contain several references to its predecessor This is especially but not uniquely true of Chapters 3 4 and 6 which may be regarded as advanced versions of the corresponding chapters in Mathematical Reflections Like its predecessor the present work consists of nine chapters each devoted to a lively mathematical topic and each capable in principle of being read independently of the other chapters Thus this is not a text which as is the intention of most standard treatments of mathematical topics builds systematically on certain common themes as one proceeds 1 Mathematical Reflections In a Room with Many Mirrors Springer Undergraduate Texts in Mathematics 1996 Second Printing 1998 We will refer to this simply as MR 2 There was an exception in MR Chapter 9 was concerned with our thoughts on the doing and teaching of mathematics at the undergraduate level **Topics in the Theory of Numbers** Janos Suranyi, Paul Erdős, 2003-01-14 Number theory the branch of mathematics that studies the properties of the integers is a repository of interesting and quite varied problems sometimes impossibly difficult ones In this book the authors have gathered together a collection of problems from various topics in number theory that they find beautiful intriguing and from a certain point of view instructive **Groups and Symmetry** Mark A. Armstrong, 1997-02-27 This is a gentle introduction to the vocabulary and many of the highlights of elementary group theory Written in an informal style the material is divided into short sections each of which deals with an important result or a new idea Includes more than 300 exercises and approximately 60 illustrations A Course in Modern Geometries Judith N. Cederberg, 2013-03-09 A Course in Modern Geometries is designed for a junior senior level course for mathematics majors including those who plan to teach in secondary school Chapter 1 presents several finite geometries in an axiomatic framework Chapter 2 continues the synthetic approach as it introduces Euclid's geometry and ideas of non Euclidean geometry In Chapter 3 a new introduction to symmetry and hands on explorations of isometries precedes the extensive analytic treatment of isometries similarities and affinities A new

concluding section explores isometries of space Chapter 4 presents plane projective geometry both synthetically and analytically The extensive use of matrix representations of groups of transformations in Chapters 3 4 reinforces ideas from linear algebra and serves as excellent preparation for a course in abstract algebra The new Chapter 5 uses a descriptive and exploratory approach to introduce chaos theory and fractal geometry stressing the self similarity of fractals and their generation by transformations from Chapter 3 Each chapter includes a list of suggested resources for applications or related topics in areas such as art and history The second edition also includes pointers to the web location of author developed guides for dynamic software explorations of the Poincaré model isometries projectivities conics and fractals Parallel versions of these explorations are available for Cabri Geometry and Geometer's Sketchpad Judith N Cederberg is an associate professor of mathematics at St Olaf College in Minnesota

Complex Analysis Theodore W. Gamelin, 2013-11-01 The book provides an introduction to complex analysis for students with some familiarity with complex numbers from high school It consists of sixteen chapters The first eleven chapters are aimed at an Upper Division undergraduate audience The remaining five chapters are designed to complete the coverage of all background necessary for passing PhD qualifying exams in complex analysis Topics studied in the book include Julia sets and the Mandelbrot set Dirichlet series and the prime number theorem and the uniformization theorem for Riemann surfaces The three geometries spherical euclidean and hyperbolic are stressed Exercises range from the very simple to the quite challenging in all chapters The book is based on lectures given over the years by the author at several places including UCLA Brown University the universities at La Plata and Buenos Aires Argentina and the Universidad Autónoma de Valencia Spain

Undergraduate Algebra Serge Lang, 2006-10-31 This book together with Linear Algebra constitutes a curriculum for an algebra program addressed to undergraduates The separation of the linear algebra from the other basic algebraic structures fits all existing tendencies affecting undergraduate teaching and I agree with these tendencies I have made the present book self contained logically but it is probably better if students take the linear algebra course before being introduced to the more abstract notions of groups rings and fields and the systematic development of their basic abstract properties There is of course a little overlap with the book Linear Algebra since I wanted to make the present book self contained I define vector spaces matrices and linear maps and prove their basic properties The present book could be used for a one term course or a year's course possibly combining it with Linear Algebra I think it is important to do the field theory and the Galois theory more important say than to do much more group theory than we have done here There is a chapter on finite fields which exhibit both features from general field theory and special features due to characteristic p Such fields have become important in coding theory

Rational Points on Elliptic Curves Joseph H. Silverman, John Tate, 2013-04-17 In 1961 the second author delivered a series of lectures at Haverford College on the subject of Rational Points on Cubic Curves These lectures intended for junior and senior mathematics majors were recorded transcribed and printed in mimeograph form Since that time they have been widely distributed as photocopies of

ever decreasing legibility and portions have appeared in various textbooks Husemoller 1 Chahal 1 but they have never appeared in their entirety In view of the recent interest in the theory of elliptic curves for subjects ranging from cryptography Lenstra 1 Koblitz 2 to physics Luck Moussa Waldschmidt 1 as well as the tremendous purely mathematical activity in this area it seems a propitious time to publish an expanded version of those original notes suitable for presentation to an advanced undergraduate audience We have attempted to maintain much of the informality of the original Haverford lectures Our main goal in doing this has been to write a textbook in a technically difficult field which is readable by the average undergraduate mathematics major We hope we have succeeded in this goal The most obvious drawback to such an approach is that we have not been entirely rigorous in all of our proofs In particular much of the foundational material on elliptic curves presented in Chapter I is meant to explain and convince rather than to rigorously prove
