course from teacher centered to the more engaging learner centered model Filled with self assessments and worksheets that are based on each of the five practices identified in Maryellen Weimer s *Learner Centered Teaching* this groundbreaking book gives instructors faculty developers and instructional designers a practical and effective resource for putting the learner centered model into action *Foundation Years and Why They Matter* Stephen Leech,Sarah Hale,2024-11-07 *Foundation Years and Why They Matter* presents a selection of case studies illustrating the diversity of foundation year provision and delivering a compelling narrative about what foundation years are what they do how they do it and the impact they have Technology Integration and Transformation in STEM Classrooms Martin, Christie,Miller, Bridget T.,Polly, Drew,2022-10-28 Teacher and student access to technology in both schools and at home continues to rise Due to this increase there is a need to examine how technology is supporting teaching and learning in STEM classrooms from early childhood through college level mathematics To ensure it is utilized appropriately further study on the use of technology in classrooms where students are learning science technology engineering and mathematics content is required *Technology Integration and Transformation in STEM Classrooms* offers meaningful and comprehensive examples of implementing technology to support STEM teaching and learning and provides a deeper understanding of how to ensure technology is used to enhance the learning environment The book also details how educators can select effective learning tools for their classrooms Covering key topics such as student engagement active learning teacher leaders and e learning this reference work is ideal for administrators policymakers educational leaders researchers academicians scholars practitioners instructors and students Elliptic Systems of Phase Transition Type Nicholas D. Alikakos,Giorgio Fusco,Panayotis Smyrnelis,2019-01-21 This book focuses on the vector Allen Cahn equation which models coexistence of three or more phases and is related to Plateau complexes non orientable objects with a stratified structure The minimal solutions of the vector equation exhibit an analogous structure not present in the scalar Allen Cahn equation which models coexistence of two phases and is related to minimal surfaces The 1978 De Giorgi conjecture for the scalar problem was settled in a series of papers Ghoussoub and Gui 2d Ambrosio and Cabre 3d Savin up to 8d and del Pino Kowalczyk and Wei counterexample for 9d and above This book extends in various ways the Caffarelli Cordero density estimates that played a major role in Savin s proof It also introduces an alternative method for obtaining pointwise estimates Key features and topics of this self contained systematic exposition include Resolution of the structure of minimal solutions in the equivariant class a for general point groups and b for general discrete reflection groups thus establishing the existence of previously unknown lattice solutions Preliminary material beginning with the stress energy tensor via which monotonicity formulas and Hamiltonian and Pohozaev identities are developed including a self contained exposition of the existence of standing and traveling waves Tools that allow the derivation of general properties of minimizers without any assumptions of symmetry such as a maximum principle or density and pointwise estimates Application of the general tools to equivariant solutions rendering exponential estimates

rigidity theorems and stratification results This monograph is addressed to readers beginning from the graduate level with an interest in any of the following differential equations ordinary or partial nonlinear analysis the calculus of variations the relationship of minimal surfaces to diffuse interfaces or the applied mathematics of materials science *Setting a Course for Mathematical Success* Barbara J.
