Plasticity and Pathology David Bates, Nima Bassiri, 2016-01-15 Two leading neuroscientists examine the current paradigm of the neural subject and what we can learn from neurological trauma pathology and adaption With the rise of cognitive science and the revolution in neuroscience the study of human subjects thinking feeling acting individuals ultimately focuses on the human brain In both Europe and the United States massive state funded research is focused on mapping the brain in all its remarkable complexity The metaphors employed are largely technological using a diagram of synaptic connectivity as a path to understanding human behavior But alongside this technologized discourse we find another perspective one that emphasizes the brain s essential plasticity both in development and as a response to traumas such as strokes tumors or gunshot wounds This collection of essays brings together a diverse range of scholars to investigate how the neural subject of the twenty first century came to be Taking approaches both historical and theoretical they probe the possibilities and limits of neuroscientific understandings of human experience Topics include landmark studies in the history of neuroscience the relationship between neural and technological pathologies and analyses of contemporary concepts of plasticity and pathology in cognitive neuroscience Central to the volume is a critical examination of the relationship between pathology and plasticity Because pathology is often the occasion for neural reorganization and adaptation it exists not in opposition to the brain s normal operation but instead as something intimately connected to our ways of being and understanding

From Energy to Information Bruce Clarke, Linda Dalrymple Henderson, 2002 This book offers an innovative examination of the interactions of science and technology art and literature in the nineteenth and twentieth centuries Scholars in the history of art literature architecture computer science and media studies focus on five historical themes in the transition from energy to information thermodynamics electromagnetism inscription information theory and virtuality Different disciplines are grouped around specific moments in the history of science and technology in order to sample the modes of representation invented or adapted by each field in response to newly developed scientific concepts and models By placing literary fictions and the plastic arts in relation to the transition from the era of energy to the information age this collection of essays discovers unexpected resonances among concepts and materials not previously brought into juxtaposition In particular it demonstrates

the crucial centrality of the theme of energy in modernist discourse Overall the volume develops the scientific and technological side of the shift from modernism to postmodernism in terms of the conceptual crossover from energy to information The contributors are Christoph Asendorf Ian F A Bell Robert Brain Bruce Clarke Charlotte Douglas N Katherine Hayes Linda Dalrymple Henderson Bruce J Hunt Douglas Kahn Timothy Lenoir W J T Mitchell Marcos Novak Edward Shanken Richard Schiff David Tomas Sha Xin Wei and Norton Wise

Making and Breaking Mathematical Sense Roi Wagner, 2017-01-10 In line with the emerging field of philosophy of mathematical practice this book pushes the philosophy of mathematics away from questions about the reality and truth of mathematical entities and statements and toward a focus on what mathematicians actually do and how that evolves and changes over time How do new mathematical entities come to be What internal natural cognitive and social constraints shape mathematical cultures How do mathematical signs form and reform their meanings How can we model the cognitive processes at play in mathematical evolution And how does mathematics tie together ideas reality and applications Roi Wagner uniquely combines philosophical historical and cognitive studies to paint a fully rounded image of mathematics not as an absolute ideal but as a human endeavor that takes shape in specific social and institutional contexts The book builds on ancient medieval and modern case studies to confront philosophical reconstructions and cutting edge cognitive theories It focuses on the contingent semiotic and interpretive dimensions of mathematical practice rather than on mathematics claim to universal or fundamental truths in order to explore not only what mathematics is but also what it could be Along the way Wagner challenges conventional views that mathematical signs represent fixed ideal entities that mathematical cognition is a rigid transfer of inferences between formal domains and that mathematics exceptional consensus is due to the subject's underlying reality The result is a revisionist account of mathematical philosophy that will interest mathematicians philosophers and historians of science alike

more interdisciplinary diverse communal and ecological future The Routledge Handbook of Language and Science is an essential reference for anyone with an interest in this area The Cambridge Companion to Literature and Science Steven Meyer, 2018-05-03 This Companion shows how literature and science inform one another and that they are more closely aligned than they typically appear Perspectives on Multimodality Eija Ventola, Cassily Charles, Martin Kaltenbacher, 2004 This volume signposts several paths of multimodality research and theory building today The chapters represent a cross section of current perspectives on multimodal discourse with a special focus on theoretical and methodological issues modal hierarchies modelling semiotic resources as multiple semiotic systems multimodal corpus annotation In addition it discusses a wide range of applications for multimodal description in fields like mathematics entertainment education museum design medicine and translation **Opening the Research Text** Elizabeth de Freitas, Kathleen Nolan, 2007-12-19 In this chapter we interrogate the debate between mathematicians and mathematics educators This debate is widely recognized in the United States for instance where the term math wars is often used in reference to the heated disagreements between mathematicians and mathematics educators Such recognition might suggest that this topic itself has relevance both for the academy and for educational policy pertaining to mathematics education We propose to locate this debate unavoidably whenever and wherever mathematics education is written Our aim is to show how the debate itself gives rise to the inscription mathematics education Indeed we contend that mathematics education cannot be defined outside of or prior to the debate for it is precisely through the debate that it is constituted as a domain for deliberation The debate is more primordial than any epistemic or domain implied by it In other words we argue that mathematics and mathematics education do not exist epistemically prior to the debate In order to engage this issue we consider a transcription of a panel debate between mathematicians and mathematics educators held in Brazil in 1998 There is at least a double meaning for the word debate it may mean a meeting having a beginning and an end well localized in space and time and with a specific proposal or focus as in the following sentence I am going to see on TV the debate between Bush and Blair tomorrow at 5 pm

Mathematicians as Enquirers Leone L. Burton, 2004-04-30 It is amazing that the usual reply to being introduced to a mathematician is a stumbling apology about how bad someone is at mathematics no matter how good they may be in reality The problem is that we have come to view mathematics as an arcane branch of knowledge that only a few can aspire to understand or grasp The sense of separation between those who have the knowledge and those who do not is present even amongst academics where many of the same skills and research practices exist intuition the use of symbolic structures and the use of intuition and insight The more worrying aspect of this separation is the ever declining numbers of students choosing mathematics as part of their curriculum beyond the stage when it is mandatory Even worse it would seem that the mathematics community has created a discriminatory environment that deters many students from continuing beyond secondary and tertiary education Exit interviews with graduates show a stark rejection of their previously chosen subject

What about mathematicians themselves how do they see themselves Do male and female mathematicians come to know their mathematics in different ways do they tackle different problems with varying results for their status in the research community Does the pervasive labelling that mathematics is a male domain arise because of a lack of role models for women or through its highly competitive hierarchical nature Are the negative labels often associated with mathematics i e
