Mishra, V.P. Singh, 2013-03-14 The Soil Conservation Service SCS curve number CN method is one of the most popular methods for computing the runoff volume from a rainstorm It is popular because it is simple easy to understand and apply and stable and accounts for most of the runoff producing watershed characteristics such as soil type land use hydrologic condition and antecedent moisture condition The SCS CN method was originally developed for its use on small agricultural watersheds and has since been extended and applied to rural forest and urban watersheds Since the inception of the method it has been applied to a wide range of environments In recent years the method has received much attention in the hydrologic literature The SCS CN method was first published in 1956 in Section 4 of the National Engineering Handbook of Soil Conservation Service now called the Natural Resources Conservation Service U.S. Department of Agriculture The publication has since been revised several times However the contents of the methodology have been nonetheless more or less the same Being an agency methodology the method has not passed through the process of a peer review and is in general accepted in the form it exists Despite several limitations of the method and even questionable credibility at times it has been in continuous use for the simple reason that it works fairly well at the field level **Catalog of Copyright Entries. Fitting to Machine Learning Achim Zielesny, 2011-07-28 The analysis of experimental data is at heart of science from its beginnings But it was the advent of digital computers that allowed the execution of highly non linear and increasingly complex data analysis procedures methods that were completely unfeasible before Non linear curve fitting clustering and machine learning belong to these modern techniques which are a further step towards computational intelligence The goal of this book is to provide an interactive and illustrative guide to these topics It concentrates on the road from two dimensional curve fitting to multidimensional clustering and machine learning with neural networks or support vector machines Along the way topics like mathematical optimization or evolutionary algorithms are touched All concepts and ideas are outlined in a clear cut manner with graphically depicted plausibility arguments and a little elementary mathematics The major topics are extensively outlined with exploratory examples and applications The primary goal is to be as illustrative as possible without hiding problems and pitfalls but to address them The character of an illustrative cookbook is complemented with specific sections that address more fundamental questions like the relation between machine learning and human intelligence These sections may be skipped without affecting the main road but they will open up possibly interesting insights beyond the mere data message All topics are completely demonstrated with the aid of the commercial computing platform Mathematica and the Computational Intelligence Packages CIP a high level function library developed with Mathematica's programming language on top of Mathematica's algorithms CIP is open source so the detailed code of every method is freely accessible All examples and applications shown throughout the book may be used and customized by the reader without any restrictions The target readerships are students of computer science and engineering as well as scientific practitioners in industry and academia who deserve an illustrative introduction to these topics Readers with programming skills may easily port and customize the provided code
