

Career Choice: Do Students' Precolleage Mathematics Programs Deny It?

It was the purpose of this study to gather information concerning the status of the mathematical preparation of high school seniors in Wyoming and to determine the mathematics necessary for entrance into University of Wyoming programs.

At the time of the study, Wyoming had 73 public high schools; the number of seniors enrolled in these schools ranged from 597 to 3,111. These schools were divided into five types (Table 1) based upon senior class size. Forty-seven of these schools were selected for inclusion in the study using an intact-groups modification of the stratified random sampling technique employed by the various studies of the Wyoming Educational Needs Assessment Program.¹ The objective of the technique was to identify a sample which included at least 60 percent of all Wyoming seniors and which was comprised of 60 percent of the seniors in each of the five types of schools. In fact, the sample selected included 70 percent of the senior population. Because "whole schools" were selected and a minimum representation of 60 percent was desired, the actual percents for the five school types ranged from 62 (Type IV) to 76 (Type I).

A school's agreement to participate in the study meant that a contact person would complete a general information form about the school and would administer the survey instrument to *all* seniors in the school using written directions and definitions provided by the investigators. It should be noted that many schools administered the survey selectively rather than to all seniors as requested. The schools engaging in such "selective" administration reported using the instrument only with seniors currently enrolled in mathematics classes.

It was hoped that the selection procedures described above would ensure returns which included at least 60 percent of the seniors in each of the five types of schools. Returns were received from 40 of the 47 schools; the 2010 individual respondents represented a response rate of 45 percent of the original sample of 4477 seniors and 32 percent of the total population of 6380 seniors.
