Eastern European Mathematics Education in the Decades of Change Alexander Karp, 2020-05-04 This contributed volume is devoted to the recent history and evolution of mathematics education in Eastern Europe, exploring how it was influenced by social and political changes in this part of the world. Despite the broad recognition of the importance of these changes, little scholarship exists that examines the ways in which they were followed by changes in the teaching of mathematics in the post-socialist countries. Indeed, the analyzed processes are complex and vary across the states. Accordingly, this book touches on many factors, including differences in cultures and traditions that find expression in the teaching of mathematics. Specifically, this volume seeks to explore what changes there were in education in general and in the position of mathematics in school education in these years and how these changes may be explained and documented; what changes there were in the content of mathematics education and its assessment and how they were motivated and adopted; what new textbooks appeared and what new methodological ideas were offered in them; how and why mathematics teacher education and/or professional development changed; what was the role, if any, of foreign influences on mathematics education etc. The book will be of interest to both researchers in mathematics education and practitioners (teachers as well as a broader audience of historians and educators) exploring the political aspects of education. *Mathematiklernen vom*

Kindergarten bis zum Studium Aiso Heinze, Meike Grüßing, 2013-09-25 Mathematik als bedeutender Lerninhalt begleitet die meisten Menschen vom Kindesalter bis zur Ausbildung beziehungsweise zum Studium. Eine wesentliche Bedingung für die individuelle Kompetenzentwicklung in diesem Fach ist dabei die Kohärenz der Lernangebote in ihren Inhalten, Zielen und Anforderungen. Inkohärenzen zwischen den einzelnen Bildungseinrichtungen in unserem Bildungssystem stellen eine Herausforderung für die Entwicklung der mathematischen Kompetenzen im Bildungsverlauf jedes Einzelnen dar. In diesem Buch diskutieren über 30 Autorinnen und Autoren aus der Mathematikdidaktik, den Erziehungswissenschaften und der Psychologie die mathematische Kompetenzentwicklung für die einzelnen Bildungsphasen vom Kindergarten bis zur Ausbildung bzw. bis zum Studium sowie für die dazwischen liegenden Übergangsphasen. Wesentliches Ziel ist dabei vor allem die Betrachtung empirischer Ergebnisse aus der Perspektive einer langfristigen Kompetenzentwicklung. Es zeigt sich dabei, dass der Stand der Forschung für die verschiedenen Phasen des Mathematiklernens sehr unterschiedlich ist. Während für den Übergang vom Elementarbereich in den Primarbereich bereits zahlreiche empirische Resultate vorliegen, sind die Übergänge von der Schule in die Ausbildung bzw. in das Studium in Bezug auf das Mathematiklernen nur wenig erforscht.

Mobile Learning and Mathematics Helen Crompton, John Traxler, 2015-02-11 Mobile Learning and Mathematics provides an overview of current research on how mobile devices are supporting mathematics educators in classrooms across the globe. Through nine case studies, chapter authors investigate the use of mobile technologies over a range of grade levels and mathematical topics, while connecting chapters provide a strong foundational background in mobile learning theories, instructional design, and learner support. For current educators, Mobile Learning and Mathematics provides concrete ideas and strategies for integrating mobile learning into their mathematics instruction, for example by sharing resources that will help implement Common Core State Standards or by streamlining the process of selecting from the competing and often confusing technology options currently available. A cutting edge research volume, this collection also provides a springboard for educational researchers to conduct further study.

Learning Strategies in Engineering Mathematics Birgit Grieser, 2017-02-28 Birgit Grieser presents MP2 Math Plus, a support project for first year students in engineering at Ruhr University of Bochum that aims at preventing unnecessary drop out. Conceptualisation and development of the project follow a design research approach according to Gravemeijer, Cobb and van den Akker. The interventions focus on learning strategies which are collected in a pre-post design with the aid of the LIST questionnaire by Wild and Schiefele. These and other data are utilised for the evaluation of MP2 Math Plus. The results confirm the adaptations of the project procedures in successive cycles, stress the importance of effort and motivation, and assess the success of the project.

Übergang Schule-Hochschule Andrea Frank, Dennis Mocigemba, Charlotte Zwiauer, 2014-12-29 Das Buch befasst sich mit dem Übergang Schule Hochschule und wird von Andrea Frank, Bielefeld; Dennis Mocigemba, Freiburg; Charlotte Zwiauer, Wien herausgegeben. Die Fälle an nachahmenswerten Maßnahmen zur Gestaltung des Übergangs ist nicht nur imposant sondern verweist darauf dass die Integration von Einzelmaßnahmen zu einem sinnvollen Gesamtkonzept für Hochschulen eine große institutionelle Herausforderung darstellt. Mit der Auswahl und Zusammenstellung der Beiträge wird einerseits zu weiteren interessanten wissenschaftlichen Untersuchungen der Übergänge von der Schule an die Hochschulen angeregt andererseits sollen die Beispiele aus der Praxis zur Nachahmung oder Modifikation eigener Maßnahmen inspirieren. *PISA 2022 Skalenhandbuch* Maren Müller et al., 2025.
