Integration of Computer Modeling and Field Observations in Geomorphology J.F. Shroder, M.P. Bishop, 2003-09-26 The integration of classic field gathered data with new computer models has allowed many new advances in geomorphology which the 31st Binghamton Millennium Symposium 2000 presents in this latest of the well known Binghamton book series the Integration of Computer Modeling and Field Observations in Geomorphology Conceptual models have been most commonly inferred from analyses of topography and investigator perspectives derived from fieldwork The main stumbling blocks to understanding surface processes their interactions temporal changes and resulting landforms are the difficulty of observation geological timescales involved spatial scale dependencies and the inability to attribute differences to either process or age Physically based computer models have thus become essential tools primarily because of their ability to explore spatial and temporal trends and to determine the sensitivity of physical inputs to change without the difficulties of identification and generalization associated with the complexity of field studies Thus the combination of both methods or the integration of field methods with computer modeling become a very powerful mechanism for robust understanding This new book presents topics on fluvial processes of overland and channelized flow in arid humid and periglacial areas of high and low relief as well as work on interlinked biogeographic and geomorphic fluctuations in alpine terrain and ground penetrating radar of coastal geomorphology Issues of long term evolution of drainage networks are addressed in natural systems as well as stream table environments and terrain analyses characterize surficial and subsurface geomorphic features by using GIS and remote sensing Botanical and biogeomorphologic controls of landforms are assessed along with issues of scientific visualization cartographic

B.W. Flemming, M.T. Delafontaine, G. Liebezeit, 2000-12-08 Muddy coasts are land sea transitional environments commonly found along low energy shorelines which either receive large annual supplies of muddy sediments or where unconsolidated muddy deposits are being eroded by wave action In providing 21 case studies in different parts of the world this book provides an up to date review of the state of the art in muddy coast research Issues dealing with hydrodynamics and suspended matter transport erosion deposition and sediment budgets on tidal flats primary production nutrient fluxes and mineralization in lagoons are treated in a multi disciplinary manner Most articles deal with issues which are of relevance with respect to global warming and future sea level rise *Mudflat Ecology* Peter G. Beninger, 2019-02-13 Intertidal mudflats are distinct highly productive marine habitats which provide important ecosystem services to the land sea interface In contrast to other marine habitats and despite a large body of primary scientific literature no comprehensive synthesis exists such that the scattered knowledge base lacks an integrated conceptual framework We attempt to provide this synthesis by pulling together and contextualizing the different disciplines tools and approaches used in the study of intertidal mudflats The editor pays particular attention to relationships between the various components of the synthesis both at the conceptual and the operational levels validating these relationships through close interaction with the various authors

Palaeoenvironmental Applications Edward J. Anthony, 2008-11-21 The last five years have been marked by rapid technological and analytical developments in the study of shore processes and in the comprehension of shore deposits and forms and shoreline change over time These developments have generated a considerable body of literature in a wide range of professional journals thus illustrating the cross disciplinary nature of shore processes and the palaeo environmental dimension of shore change The justification of the book lies in bringing together these developments using an objective approach that synthesises current advances technical progress in the analysis of shores and shore processes contradictory interpretations and potential advances using future generation developments in techniques The book provides a

comprehensive state of the art presentation of shore processes and deposits across ranges of wave energy and tide range environments sediment supply and textural conditions sea level change exceptional events and longer term climate change based on the most recently published literature in the marine sciences The book insists on the nested time and spatial scales through which are inter linked shore processes and deposits thus providing a better understanding of the way shores change over time The approach is thus cross disciplinary and gap bridging between processes and deposits between analytical techniques and between timescales The audience is from graduate level upwards and the book is intended as a comprehensive reference source for professionals in a wide range of coastal science fields geologists sedimentologists geomorphologists oceanographers engineers managers archaeologists Aimed at graduates and specialists interested in coastal science Presents background research recent developments and future trends Written by a leading scholar and industry expert Principles of Tidal Sedimentology Richard A. Davis Jr., Robert W. Dalrymple, 2011-10-20 This book presents a comprehensive contemporary review of tidal environments and deposits Individual chapters each written by world class experts cover the full spectrum of coastal shallow marine and even deep marine settings where tidal action influences or controls sediment movement and deposition Both siliciclastic and carbonate deposits are covered Various chapters examine the dynamics of sediment transport by tides and the morphodynamics of tidal systems Several chapters explore the occurrence of tidal deposits in the stratigraphic context of entire sedimentary basins This book is essential reading for both coastal geologists and managers and geologists interested in extracting hydrocarbons from complex tidal successions

Dynamic Sedimentary Environments of Mangrove Coasts Daniel Friess, Frida Sidik, 2020-12-05 Dynamic Sedimentary Environments of Mangrove Coasts provides knowledge on the importance of sedimentary dynamics in managing mangrove forests In the first part of the book the editors seamlessly offer a general introduction of mangrove sedimentary dynamics This leads into more in depth information on soil surface elevation change sea level rise and the importance of sedimentary dynamics in the loss or gain of blue carbon The book concludes the discussion of mangrove sedimentary dynamics by addressing the issues of climate change e g sea level rise and blue carbon on mangrove restoration and sediment This book will assist coastal managers and academics in addressing the gaps in mangrove restoration and coastal management As such it will be a valuable reference for advanced undergraduate students graduate students researchers academics in the field of coastal restoration and coastal management practitioners Provides a state of the art summary of research into sedimentary dynamics in mangrove forests Includes updates on issues of climate change relevant to mangroves such as blue carbon and sea level rise Presents scientific background and successful case studies for mangrove restoration that can solve problems relating to mangrove management

Brazilian Mangroves and Salt Marshes Yara Schaeffer-Novelli, Guilherme Moraes de Oliveira Abuchahla, Gilberto Cintrón-Molero, 2023-02-25 This book offers a new ecosystemic approach to the understanding of mangrove and salt marsh ecosystems Brazil has one of the largest areas of mangroves in the world where salt marshes might or might not be associated Different landscapes comprise the extensive coastline where mangrove and salt marsh species composition is discussed through the analysis of physiography zonation and succession processes Both salt marsh and mangrove plants and the associated macroalgae will be characterized in their ecophysiological and phenological aspects as well as genetic and epigenetic diversity The chapters on microbial diversity and litterfall expose the well known importance of these ecosystems as highly productive carbon sinks and pumps The associated fauna of invertebrates benthic meio and macrofaunas especially brachyuran crabs and vertebrates fishes birds and mammals are presented in a special section The conservational approach encompasses issues such as historical ecology economic valuation protected areas environmental education climate changes and adaptive management

Sediment Cascades Tim Burt, R. J. Allison, 2010-01-07 Sediment Cascades An Integrated Approach provides a comprehensive overview that addresses the transport of sediment through the landscape Suitable for academic researchers industry practitioners research students and advanced level undergraduates seeking detailed knowledge and an up to date review of the recent research literature The emphasis is on contemporary sediment system dynamics with relevance both to landscape management and landform development Sediment Cascades An Integrated Approach begins with an explanation of the need for an integrated approach to sediment delivery systems and introduces the main themes of sediment production delivery storage and transfer Further chapters then focus on specific environments from mountains through floodplains to estuaries and the continental shelf Focuses on contemporary sediment system dynamics

and current research Covers a sequence of environments from steep mountains to the continental shelf Highlights the continuity of the subject by linking each component area with its adjacent elements **Coastal Wetlands** Gerardo M.E. Perillo, Eric Wolanski, Donald R. Cahoon, Mark M. Brinson, 2009-01-18 Coastal wetlands are under a great deal of pressure from the dual forces of rising sea level and the intervention of human populations both along the estuary and in the river catchment Direct impacts include the destruction or degradation of wetlands from land reclamation and infrastructures Indirect impacts derive from the discharge of pollutants changes in river flows and sediment supplies land clearing and dam operations As sea level rises coastal wetlands in most areas of the world migrate landward to occupy former uplands The competition of these lands from human development is intensifying making the landward migration impossible in many cases This book provides an understanding of the functioning of coastal ecosystems and the ecological services that they provide and suggestions for their management In this book a CD is included containing color figures of wetlands and estuaries in different parts of the world Includes a CD containing color figures of wetlands and estuaries in different parts of the world

Endangered Forested Wetlands of Sundaland Gianluca Polgar, Zeehan Jaafar, 2017-08-31 This book informs readers on the ecology ecosystem services and management of Sundaland wetland ecosystems discussing the concepts and tools necessary to conserve these imperiled habitats Sundaland is a biogeographically defined area of South East Asia

characterised by an exceptional concentration of endemic species. The unprecedented loss of wetland habitats within Sundaland warrants urgency in implementing conservation actions. The authors are both researchers who have witnessed the ongoing losses of wetland habitats in Sundaland. The first chapter introduces fundamental concepts of ecosystems, ecological processes and ecosystem services of coastal and inland wetlands. The second chapter provides an overview of the global and regional conservation status of these ecosystems. The third chapter advances the importance of wetlands management at the landscape level, drainage basins and proposes to adopt the concept of Ecotonal Networks (ENTs) as a sustainable management method within the theoretical framework of Resilience Theory. The fourth chapter showcases potential flagship species that can aid in raising awareness on these endangered but poorly known ecosystems. The fifth chapter discusses sustainable ecotourism as a viable and profitable industry to manage non-urban wetland areas of Sundaland while providing specific suggestions for future developments. The book is written for ecosystem managers, conservation scientists, ecologists and nature enthusiasts. It consists of a coherently arranged set of scientifically accurate tools that consider societal, cultural and economic factors to succeed in the conservation of the Sundaland wetlands as well as other wetland habitats in the world.
