 long and important tradition in countries around the Mediterranean and North Africa Although there are many millions of
 both large and small ruminants in these countries the output of livestock products is increasingly falling short of the demand
 created by human population expansion To reverse or at least slow down this trend requires that better use be made of
 existing animal and feed resources in effect to optimize individual productivity The strategies to be adopted to optimize
 productivity need to be developed through both basic and applied research on breeding feeding and other management
 practices Nuclear techniques employed in conjunction with standard methods play an important role in developing a proper

understanding of animal environment interactions they can also be used to examine how such interactions can be manipulated to minimize the impact of constraints and thereby to improve productivity
