Nuclear Evolution Christopher B. Hills, 1977 **Nuclear Evolution [a Guide to Cosmic Enlightenment]** Christopher B. Hills, 1968 **Nuclear Science Abstracts**, 1957 *Nuclear Evolution* Hills, 1968 **Mitonuclear Ecology** Geoffrey E. Hill, 2019 This novel text provides a concise synthesis of how the interactions between mitochondrial and nuclear genes have played a major role in shaping the ecology and evolution of eukaryotes The foundation for this new focus on mitonuclear interactions originated from research in biochemistry and cell biology laboratories although the broader ecological and evolutionary implications have yet to be fully explored The imperative for mitonuclear coadaptation is proposed to be a major selective force in the evolution of sexual reproduction and two mating types in eukaryotes in the formation of species in the evolution of ornaments and sexual selection in the process of adaptation and in the evolution of senescence The book highlights the importance of mitonuclear coadaptation to the evolution of complex life and champions mitonuclear ecology as an important subdiscipline in ecology and evolution *The Politics of Nuclear Weapons in South Asia* Bhumitra Chakma, 2016-02-24 An important and critical re evaluation of South Asia's post tests nuclear politics in contrast to other books this volume emphasises the political dimension of South Asia's nuclear weapons explains how the bombs are used as politico strategic assets rather than pure battlefield weapons and how India and Pakistan utilise them for politico strategic purposes in an extremely complex and competitive South Asian strategic landscape Written by a group of perceptive observers of South Asia this volume evaluates the current state of Indo Pakistani nuclear deterrents the challenges that the two countries confront in building their nuclear forces the post test nuclear doctrines of the two strategic rivals the implications of Indo Pakistani politics for regional cooperation the role of two systemic actors USA and China in the region's nuclear politics and the critical issues of confidence building and nuclear arms control **Evolutionary Processes in Binary and Multiple Stars** Peter Eggleton, 2006-07-20 Binary systems of stars are as common as single stars Stars evolve primarily by nuclear reactions in their interiors but a star with a binary companion can also have its evolution influenced by the companion Multiple star systems can exist stably for millions of years but can ultimately become unstable as one star grows in radius until it engulfs another This volume first published in 2006 discusses the statistics of binary stars the evolution of single stars and several of the most important kinds of interaction between two and even three or more stars Some of the interactions discussed are Roche lobe overflow tidal friction gravitational radiation magnetic activity driven by rapid rotation stellar winds magnetic braking and the influence of a distant third body on a close binary orbit A series of mathematical appendices gives a concise but full account of the mathematics of these processes **Pakistan's Pathway to the Bomb** Mansoor Ahmed, 2022-05-01 In Pakistan's Pathway to the Bomb author Mansoor Ahmed provides a groundbreaking account of Pakistan's rise as a nuclear power By drawing on elite interviews and previously untapped primary sources Ahmed reveals how bureaucratic politics shaped the nuclear program's development and where it stands

today **Single Semiconductor Quantum Dots** Peter Michler, 2009-06-13 This book reviews recent advances in the field of semiconductor quantum dots via contributions from prominent researchers in the scientific community Special focus is given to optical quantum optical and spin properties of single quantum dots **Nuclear And Particle Physics With High-intensity Proton Accelerators, Proceedings Of The 25th Ins International Symposium** Takeshi K Komatsubara, T Nomura, T Shibata, 1998-03-31 Applied mathematics connects the mathematical theory to the reality by solving real world problems and shows the power of the science of mathematics greatly improving our lives Therefore it plays a very active and central role in the scientific world This volume contains 14 high quality survey articles incorporating original results and describing the main research activities of contemporary applied mathematics written by top people in the field The articles have been written in review style so that the researcher can have a quick and thorough view of what is happening in the main subfields of applied mathematics **Thermonuclear Supernovae** P. Ruiz-Lapuente, R. Canal, J. Isern, 2012-12-06 All theoretical and observational topics relevant to the understanding of the thermonuclear Type Ia supernova phenomenon are thoroughly and consistently reviewed by a panel including the foremost experts in the field The book covers all aspects ranging from the observations of SNe Ia at all stages and all wavelengths to the 2D and 3D modelling of thermonuclear flames in very dense plasmas Scenarios for close binary evolution leading to SNe Ia are discussed Particular emphasis is placed on the homogeneity vs diversity of SNe Ia and on their use as standard candles to measure cosmological parameters The book reflects the recent and very significant progress made in both the modelling of the explosions and in the observational field **South Asia's Nuclear Security** Bhumitra Chakma, 2014-12-17 South Asia is often viewed as a potential nuclear flashpoint and a probable source of nuclear terrorism But how valid are such perceptions This book seeks to address this question and assesses the region's nuclear security from two principal standpoints First it evaluates the robustness of the Indo Pakistani mutual deterrence by analysing the strength and weaknesses of the competing arguments regarding the issue It also analyses the causes and consequences of nuclear arms race between India and Pakistan the nature of deterrence structure in the region and the challenges of confidence building and arms control between the two countries in order to assess the robustness of South Asia's nuclear deterrence Second it assesses the safety and security of the nuclear assets and nuclear infrastructure of India and Pakistan The author holds that the debate on South Asia's nuclear security is largely misplaced because the optimists tend to overemphasise the stabilising effects of nuclear weapons and the pessimists are too alarmists It is argued that while the risks of nuclear weapons are significant it is unlikely that India and Pakistan will give up their nuclear arsenals in the foreseeable future Therefore what needs to happen is that while nuclear elimination should be the long term goal in the interim years the two countries need to pursue minimum deterrence policies to reduce the likelihood of deterrence failure and the possibility of obtaining fissile materials by non state actors

The Politics of Nuclear Weapons in South Asia Dr Bhumitra Chakma, 2013-04-28 An important and critical re

evaluation of South Asia's post tests nuclear politics in contrast to other books this volume emphasises the political dimension of South Asia's nuclear weapons explains how the bombs are used as politico strategic assets rather than pure battlefield weapons and how India and Pakistan utilise them for politico strategic purposes in an extremely complex and competitive South Asian strategic landscape Written by a group of perceptive observers of South Asia this volume evaluates the current state of Indo Pakistani nuclear deterrents the challenges that the two countries confront in building their nuclear forces the post test nuclear doctrines of the two strategic rivals the implications of Indo Pakistani politics for regional cooperation the role of two systemic actors USA and China in the region's nuclear politics and the critical issues of confidence building and nuclear arms control

Cold Rivals Evan S. Medeiros, 2023 Cold Rivals brings together a distinguished group of scholars from the United States and China to examine the new era of strategic competition in US China relations The two countries are now competitors locked in a long term rivalry but how volatile the rivalry will become is still to be determined The book explores not only the historical roots and contemporary foreign policy aspects of this era but the volume also looks at the economic military and technological arenas of US China strategic competition In doing so this volume highlights important differences in US and Chinese perspectives A final section of the volume explores future scenarios for the relationship from different perspectives but with all of them coming to the sobering conclusion about a future marked by expanding differences growing tensions economic disengagement and pressures for a global competition This policy relevant book provides a comprehensive overview of US China strategic competition and reinvigorates thinking about how to avoid reaching a crisis point

Principles and Perspectives in Cosmochemistry Aruna Goswami, A fundamental question in contemporary astrophysics is the origin of the elements Cosmochemistry seeks to answer when how and where the chemical elements arose Quantitative answers to these fundamental questions require a multi disciplinary approach involving stellar evolution explosive nucleosynthesis and nuclear reactions in different astrophysical environments There remain however many outstanding problems and cosmochemistry remains a fertile area of research This book is among the first in recent times to put together the essentials of cosmochemistry combining contributions from leading astrophysicists in the field The chapters have been organized to provide a clear description of the fundamentals an introduction to modern techniques such as computational modelling and glimpses of outstanding issues

Stars Andrew King, 2012-07-26 Every atom of our bodies has been part of a star Our very own star the Sun is crucial to the development and sustainability of life on Earth This Very Short Introduction presents a modern authoritative examination of how stars live producing all the chemical elements beyond helium and how they die sometimes spectacularly to end as remnants such as black holes Andrew King shows how understanding the stars is key to understanding the galaxies they inhabit and thus the history of our entire Universe as well as the existence of planets like our own King presents a fascinating exploration of the science of stars from the mechanisms that allow stars to form and the processes that allow them to shine as well as the

astrophysics The central character of this 172 year old story is the soliton Namely a localized pulse traveling without spreading and having particle like properties plus an infinite number of conservation laws associated to its dynamics In general solitons arise as exact solutions of approximative models There are different explanations at different levels for the existence of solitons From the experimentalist point of view solitons can be created if the propagation conditions are long enough narrow enough like long and shallow channels fiber optics electric lines etc
