Benson,Marco Ramoni,2009-03-16 In the last decade DNA sequencing costs have decreased over a magnitude largely because of increasing throughput by incremental advances in tools technologies and process improvements Further cost reductions in this and in related proteomics technologies are expected as a result of the development of new high throughput techniques and the computational machinery needed to analyze data generated Automation in Proteomics proteomics methods and technologies modelling protein networks and interactions analysis via automation DNA sequencing microarrays and other parallelization technologies protein characterization and identification protein interaction and gene regulatory networks design via automation DNA synthesis RNA by design building protein
