Physiology Of Immunity:

The Physiology of Immunity James A. Marsh, Marion D. Kendall, 1996-07-24 The study of neuroendocrine immune interactions has become a highly visible and fast growing segment of mainstream immunology This book provides an overview of the immune system and in depth coverage of the many different areas that make up neuroendocrine immune research The main emphasis is on the physiology of the processes involved stressing an integrated approach to immunology The text is organized in seven sections beginning with an introduction to the immune system Section II outlines how the central nervous system CNS communicates with central and peripheral lymphoid organs Section III provides information on factors from the immune system that act as messengers to the CNS The metabolic regulation of growth and development is discussed in Section IV Section V examines the interactions occurring between the reproductive and immune systems The effects of other physiologic stressors on immunity are reviewed in Section VI Section VII considers cyclic and periodic influences on the immune system Finally there is a consideration of a new unifying theory for immunology Students researchers clinicians and veterinary scientists can discover new areas of interest in specific diseases and immune interactions in this novel presentation

Anatomy and Physiology : The Immune System Rumi Michael Leigh, The Immune System Things You Should Know Questions and Answers explains the anatomy physiology and functions of the human immune system in a question and answer format The book introduces the two main defense systems innate immunity and adaptive immunity describing their characteristics and how they protect the body It explains immune memory antigens antibodies complete and incomplete antigens and the role of toll like receptors Key topics include white blood cells such as neutrophils monocytes and basophils along with processes like inflammation phagocytosis hyperemia exudate formation and the role of histamine The text also describes the functions of B lymphocytes and T lymphocytes natural killer cells and the complement system Conditions such as autoimmune disease immunopathology leukocytosis congenital athyma and multiple sclerosis are discussed The book also explains how active and passive humoral immunity are acquired through infection vaccination maternal antibodies or donor antibodies This volume will interest students health science learners and general audiences who want to learn about the immune system its defenses and its role in health and disease

Immunity Alfred I. Tauber, 2017-01-02 Modern immunology traditionally conceives of the immune system as providing defense against pathogens Alfred I Tauber criticizes this conception of immunity as too narrow because it discounts much of the immune system s other normal functions These include active tolerance of nutritional exchanges with the environment and the stabilization of cooperative relationships with resident micro organisms An expanded account extends immunity s functional role from singular defense to broadened discernment of environmental exchange This ecological perspective has profound theoretical implications for the basic notion of immune identity is reconfigured highlighting the organism as a holobiont a consortium of diverse organisms living in cooperative relationships challenges prevailing concepts of individuality and the

self nonself dichotomy heretofore organizing immune theory Indeed if theoretical interest is focused on the challenges of maintaining immune balance in the full ecological context of the organism then immune regulation assumes new complexity Tauber maintains that the key to unravelling that puzzle requires a critical re assessment of the cognitive processes that underlie immune effector functions Accordingly he provides the outline of a re formulated cognitive paradigm that dispenses with agent based models and adopts an ecologically conceived understanding of perception and information processing The implications of this revised configuration of immunity and its deconstructed notions of individuality and selfhood have wide significance for philosophers and life scientists working in immunology ecology and the cognitive sciences
