Political Ecologist:

The Political Ecologist David Wells, Tony Lynch, 2017-03-02 Although Green approaches to politics have had some practical successes in a range of different countries the movement has lacked a fully developed and coherent political theory In this unique study David Wells and Tony Lynch demonstrate that ecological understanding and environmental concern are not just consistent with notions of social equity and grass roots democracy but that a concern for these aims are the logical consequence of what might be called political ecology They begin with a critique of existing approaches to Green politics with particular attention to the claims of deep ecology and go on to develop an important examination of the relationship between economic and ecological styles of thinking They conclude with a social commons inspired revision of Lockean politics What emerges is an important understanding of the tasks of politics rather than focusing on foreground issues of individual choice the central political challenge of our age is with the management and provision of the background conditions the ecological conditions understood in the broadest sense which allows the possibility of a reasonable life The analysis shows a concern with environmental commons engenders equal concerns for social economic and cultural commons develops an account of how such commons can be effectively managed and relates this account to more traditional political themes of democracy liberty and equity

Gezon,2005 Environmental issues have become increasingly prominent in local struggles national debates and international policies In response scholars are paying more attention to conventional politics and to more broadly defined relations of power and difference in the interactions between human groups and their biophysical environments Such issues are at the heart of the relatively new interdisciplinary field of political ecology forged at the intersection of political economy and cultural ecology This volume provides a toolkit of vital concepts and a set of research models and analytic frameworks for researchers at all levels The two opening chapters trace rich traditions of thought and practice that inform current approaches to political ecology They point to the entangled relationship between humans politics economies and environments at the dawn of the twenty first century and address challenges that scholars face in navigating the blurring boundaries among relevant fields of enquiry The twelve case studies that follow demonstrate ways that culture and politics serve to mediate human environmental relationships in specific ecological and geographical contexts Taken together they describe uses of and conflicts over resources including land water soil trees biodiversity money knowledge and information they exemplify wide ranging ecological settings including deserts coasts rainforests high mountains and modern cities and they explore sites located around the world from Canada to Tonga and cyberspace *A Comparative Political Ecology of Exurbia* Laura E. Taylor,Patrick T. Hurley,2016-05-26 This book is about politics and planning outside of cities where urban political economy and planning theories do not account for the resilience of places that are no longer rural and where local communities work hard to keep from ever becoming urban By examining exurbia as a type of place that is no longer simply rural or only tied to the economies of global resources e g mining forestry and agriculture we explore how changing landscapes are planned and designed not to be urban that is to look function and feel different from cities and suburbs in spite of new home development and real estate speculation The book s authors contend that exurbia is defined by the persistence of rural economies the conservation of rural character and protection of natural ecological systems all of which are critical components of the contentious local politics that seek to limit growth Comparative political ecology is used as an organizing concept throughout the book to describe the nature of exurban areas in the U S and Australia although

exurbs are common to many countries The essays each describe distinctive case studies with each chapter using the key concepts of competing rural capitalisms and uneven environmental management to describe the politics of exurban change This systematic analysis makes the processes of exurban change easier to see and understand Based on these case studies seven characteristics of exurban places are identified rural character access local economic change ideologies of nature changes in land management coalition building and land use planning This book will be of interest to those who study planning conservation and land development issues especially in areas of high natural amenity or environmental value There is no political ecology book quite like this neither one solely focused on cases from the developed world in this case the United States and Australia nor one that specifically harnesses different case studies from multiple areas to develop a central organizing perspective of landscape change
