Principles Of Mammalian Aging:

Principles of Mammalian Aging Robert Rothenberg Kohn, 1971 **Special Focus on the Biology of Aging** Vincent J. Cristofalo, M. Powell Lawton, 2013-12-17 **Neurobiology of Aging** J. Ordy, 2013-06-29 Aging is one of the most universal and inevitable social and scientific challenges confronting man. The lives of all multicellular organisms begin with conception, extend through phases of development, maturity, senescence, and finally end in death. Man is no exception but has the unique feature of a complex brain. It plays an integrative role in adaptation to the physical and social environments through reflexes, conditioning, and more complex forms of learning. The brain is a repository for both inherited and acquired information. With the development of speech and the formation of symbolic language, the human brain has made it possible to transmit information culturally horizontal to other members of society in addition to genetic vertical transmission to progeny. This horizontal transmission, which has reached its highest form in man, is a powerful extension of genetic transmission. The brain may provide man all that is of importance in life. It has played a key role in the evolution of life by maintaining and extending the life span. Many mental or intellectual capacities of man reach a peak in early adulthood, remain relatively constant throughout maturity, and then appear to decline during senescence. Behaviorally, there appears to be a decrease in sensory learning and motor functions with aging in all mammalian species. As integrated adaptive control systems, the brain and neuroendocrines have been closely associated with the homeostatic adaptation to environmental challenges throughout the life span. *Current Catalog* National Library of Medicine (U.S.), 1979 First multi-year cumulation covers six years 1965-70

Handbook of The Biology of Aging Edward Schneider, 2012-12-02 Handbook of the Biology of Aging Third Edition presents the methodology for biological aging studies. This book discusses the three main sources of influence on aging, namely the biological, the psychological, and the social. Organized into six parts encompassing 19 chapters, this edition begins with an overview of the pathophysiology of the processes that lead to the array of age-dependent conditions. This text then examines the clinical studies on aging with emphasis on study design, subject selection, and characterization, and the clinical relevance of the aging changes studied. Other chapters consider various topics related to aging, including circadian rhythms, protein modifications with aging, special senses, and the adrenocortical axis. This book discusses as well the study of immune dysfunction in the aged organism. The final chapter deals with odor deficits as well as subtle taste changes associated with aging. This book is a valuable resource for scientists, gerontologists, graduate students, and professionals. Annual Review of Gerontology and Geriatrics, Volume 10, 1990 Vincent J. Cristofalo, PhD, 1990-11-15 This volume presents a clear, concise overview of the current state of knowledge about the biology of aging, serving as both an invaluable graduate-level text and a key reference for practicing professionals. Over a dozen distinguished contributors probe the latest developments in our knowledge of why people age and how the process works. These authoritative chapters are not just written for biologists but for gerontologists in general. Marks the tenth anniversary of the Annual Review of Gerontology and Geriatrics Free

Radicals and Aging Ingrid Emerit, Chance, 2013-03-13 Among the various theories proposed to account for the process of aging the free radical theory is of practical interest since it includes the possibility of retarding this process by administering natural or synthetic antioxidants and free radical scavengers The book *Free Radicals and Aging* summarizes knowledge accumulated during recent years in 42 reviews written by experts in the field Aspects of free radical involvement in the intrinsic aging process and in age related diseases as well as the importance of the pro antioxidant balance throughout life are discussed Epidemiological studies from several European countries are reported showing correlations between low plasma levels of essential antioxidants and the occurrence of coronary heart disease cancer and cataract formation Appropriate nutrition as well as prophylactic and therapeutic use of antioxidants are considered This book represents a milestone in the field of age related free radical biology and medicine With contributions by A Azzi B Chance R G Cutler H Esterbauer P H Evans F Gey C Guarnieri D Harman N I Krinsky M Meydani J Miquel A Mori L Packer C Rice Evans M Simic A Taylor T Yoshikawa

Aging and Male Sexuality Raul C. Schiavi, 1999-06-17 Awareness of the importance of sexuality and its disorders in the aging population is increasing as the proportion of older people increases Based in part on the author's clinical experience and research at Mount Sinai Medical Center in New York this book presents an up to date overview of the sexuality of aging men in health and illness within a multidimensional conceptual framework It takes into account physiological psychological interpersonal and social influences The book also discusses the impact of medical illness psychopathology and drugs with a review of coping strategies in shaping individual sexual responses to aging and disease The author incorporates many case studies and vignettes and devotes a chapter to the sexuality of older gay men A balanced account of medical and psychosocial evaluation and treatment concludes the book which will be of broad interest to clinicians and students interested in sexuality and aging

Insect Aging Klaus-Günter Collatz, Rajindar S. Sohal, 2012-12-06 *Leben ist die schönste Erfindung der Natur und der Tod ist ihr Kunstgriff viel Leben zu haben* J W v Goethe *Life is the most beautiful invention of nature and death is her device to exhibit most life* The eminent British biologist Sir Vincent B Wigglesworth noted in 1939 that insects are an ideal medium in which to study all problems of physiology Many fundamental discoveries in biology particularly genetics and development have been made on the basis of studies conducted in insects Because of their extreme adaptability and diversity an appropriate insect model is available for the study of virtually any biological problems The applicability to other groups including mammals of basic studies conducted on insects has helped in the gradual acceptance of the fundamental unity of biochemical principles as a dogma among biologists as well as among enlightened medical scientists With the recent upsurge of interest in the study of the aging process in insects have been increasingly employed not only for the investigation of basic mechanisms of aging but also to gain insight into the evolution of aging and senescence If only one aging mechanism exists it is foreseeable that some insects especially *Drosophila* will help to unravel its molecular basis Because of their diversity existing studies in the gerontology of insects are widely scattered in various

specialized journals This wealth of existing information has not as yet been brought together in a synthesized and comprehensive form Neurobiological Aspects of Maturation and Aging ,1973-01-01 Neurobiological Aspects of Maturation and Aging **Biology of Longevity and Aging** Robert Arking,2019-01-10 An introductory text to the biology of aging and longevity offering a thorough review of the field **Brain Function in Old Age** H. P. Krause,F. Hoffmeister,C. Müller,2012-12-06 Experimental gerontopsychology attempts to test causal hypotheses about old age related behavioral changes by the manipulation of age differences An experimental treatment is introduced with the purpose of equating different age groups with respect to a potentially relevant function If the treatment results in an assimilation of the behavior of the different age groups age by treatment interaction differences in this function are considered as causal for the normally observed behavioral difference If it does not result in an assimilation of the behavior of the different age groups main effect of treatment differences in this function are considered as irrelevant for the normally observed behavioral difference The different interpretations of age by treatment interactions and main effects of treatment in this kind of research are reasonable only if the experimental treatment actually results in an equalization of the age groups with respect to the function of interest As is shown such a functional equalization can neither be demonstrated nor assumed in many cases In such cases studies with either age group can be used to investigate hypotheses about potential causes for old age related behavioral changes studies with young subjects having important advantages over studies with old subjects A test of causal relationships by age by treatment interactions is possible in cases where the experimental treatment evidently results in an equalization of the age groups with respect to the function in question Unfortunately the field of application for this kind of approach is rather limited **Religion and Aging in the Indian Tradition** Shrinivas Tilak,1989-07-01 The manner of aging is a cultural construct and there is a specifically Indian way of aging That way is shown in this book through the analyses of key concepts aging jara stages of life asarama time kala determinate deeds karma desire kama change parinama and rejuvenative force vaja The author offers important transcultural insights into the realities of aging disease and inevitable death faced by all The composite Indian religious tradition provides patterns for shaping the aging experience into a meaningful system of vital social values ethical principles and life goals This analysis of the Indian approach provides significant clues for understanding aging in other cultures **The Aging Brain and Senile Dementia** K. Nandy,2012-12-06 There are currently about 21 million people over 65 years in the United States and over a million of them suffer from a severe degree of mental impairment This number will undoubtedly increase as more and more people attain their full lifespan The Veterans Administration is acutely aware of this problem in the population it serves Currently there are about 31 million veterans in the United States About 13 percent of these veterans are over 65 years of age and the number is expected to increase to 40 percent by the turn of the century In recognition of the pressing need to address this problem eight Geriatric Research Educational and Clinical Centers GRECC have been established under the auspices of the Veterans

Administration and the guiding spirit of Dr Paul Haber Assistant Chief Medical Director for Professional Services Veterans Administration The purpose of these centers is to develop a better understanding of the complex biomedical and socio economic problems of the aged in general and to enhance the quality of life of the older veterans in particular o Gerontologists working towards a better understanding of the aging process and better care of the aged have made major progress in the biomedical field in the last decade Among the efforts made by the Veterans Administration the department of Extended Care and Academic Affairs have sponsored a number of symposia in the field of Gerontology

Long-lived Proteins in Human Aging and Disease Roger J. W. Truscott, 2021-01-28 This authoritative overview on an emerging topic in the molecular life sciences covers all aspects of the aging of long lived proteins It describes the molecular mechanisms of aging on the protein level in particular the most common side chain modifications and includes analytical methods to study protein half life and the accumulation of modifications Finally the impact of protein aging on several age related diseases in humans is dissected and their role in limiting human lifespan is discussed

Aging and Cell Function John Johnson, 2013-11-11 The aging process like most all things in the universe is a puzzle It is such a fundamental occurrence common to all living things that it ironically may be the most complicated and perplexing puzzle to solve There are of course puzzles sufficient in number to occupy all the scientists and philosophers who have ever lived a thousand times over Yet what other phenomenon affects everyone of us as much as growing old Curiosity about the ubiquity of aging as a phenomenon boosted perhaps by an only natural fear of that same phenomenon as an undeniable manifestation of our own mortality has led to the compilation of data on the aging process which have accumulated as rapidly as the elderly who might benefit from those data Most of the scientific data on the biology of aging are at the biochemical and physiological levels while comparatively little information has been available at the anatomical level Because of this a two volume set called Aging and Cell Structure was conceived the first volume having been published in 1981 and the second volume being published concurrently with the present one on cell function The emphasis on training of scientists and other individuals in advanced education has during past decades been one of increased specialization Not merely do we specialize in physiology anatomy zoology or literature but in glomerular filtration synaptic junctions tree frogs of Brazil or English poetry of the nineteenth century

Skin and Aging Processes Barbara A. Gilchrest, 1984-02-10 This text deals comprehensively with the aging processes of the skin It organizes the disciplines of dermatologic gerontology and geriatrics and critically examines their current content with an eye to future needs All aspects of the aging processes in the skin are considered psychosocial effects medical and financial impacts of skin disease documented use of the skin as a model system for gerontologic studies and general theories of aging Age associated changes in normal human skin are defined and previously published studies on this subject are critically reviewed For each skin disorder diagnostic criteria clinical and histologic features and therapeutic options are reviewed in light of possible pathogenic mechanisms and their relationship to the aging process

Epidemiology of Aging, 1975 **The Biology of Aging** John A. Behnke, 2012-12-06 Egocentricity is characteristically human. It is natural for our prime interest to be ourselves and for one of our major concerns to be what affects us personally. Aging and death, universal and inevitable, have always been of compelling concern. Mystical explanations were invented when scientific answers were lacking and gross physiology. As scientific knowledge developed, anatomical processes were explained and the roles of the endocrine glands were revealed. Since the sex hormones obviously lose some of their potency with age, it was logical to assume that they played the major role in declining general well-being. The puzzle of aging would now be solved. The Ponce de Leon quest would soon be fulfilled. Pseudoscientists and quacks rushed in where most scientists feared to tread. By the time the glowing promises of perpetual youth through gland transplants and injections had proved illusory, serious study of the aging process had been set back for years. The field had lost respectability and most capable scientists shunned it. Those who did continue to seek answers to its tough questions deserve special recognition.

Gerontology for the Health Care Professional Regula Robnett, Walter Chop, 2010-03-26 Gerontology For The Health Care Professional Second Edition is a comprehensive practical text covering the evolving field of gerontology written for health care students and professionals. This text is clinically relevant while implementing theoretical treatment of the subject matter. Written by experts across many health professions, Gerontology For The Health Care Professional Second Edition presents an up-to-date and realistic view on the aging process.
