Self-Defense Mechanisms
 These self-defense mechanisms may not really reflect inner conflict, but they do reflect the ego's attempt to deal with the anxiety associated with the knowledge of his or her unconscious sexual motivation (or "hidden meaning") of the dream. The ego must be characterized by the extent to which the conscious self identifies unconscious motives and the unconscious self by its tendency to deny such motives. The ego's function is to maintain a balance between the conscious and unconscious. It is the function of the ego to keep the unconscious from interfering with the individual's well-being. But, any interference by the ego's conscious component (conscious self) with unconscious motives is a self-defense mechanism. The ego's self-defense mechanism is to keep the unconscious from interfering with the conscious self's goals.
