Security and Privacy in Mobile Information and Communication Systems Andreas U. Schmidt, Giovanni Russello, Antonio Lioy, Neeli R. Prasad, Shiguo Lian, 2010-11-29 MobiSec 2010 was the second ICST conference on security and privacy in mobile information and communication systems With the vast area of mobile technology research and application the intention behind the creation of MobiSec was to make a small but unique contribution to build a bridge between top level research and large scale application of novel kinds of information security for mobile devices and communication

Handbook of Mobile Data Privacy Aris Gkoulalas-Divanis, Claudio Bettini, 2018-10-26 This handbook covers the fundamental principles and theory and the state of the art research systems and applications in the area of mobility data privacy It is primarily addressed to computer science and statistics researchers and educators who are interested in topics related to mobility privacy This handbook will also be valuable to industry developers as it explains the state of the art algorithms for offering privacy By discussing a wide range of privacy techniques providing in depth coverage of the most important ones and highlighting promising avenues for future research this handbook also aims at attracting computer science and statistics students to this interesting field of research The advances in mobile devices and positioning technologies together with the progress in spatiotemporal database research have made possible the tracking of mobile devices and their human companions at very high accuracy while supporting the efficient storage of mobility data in data warehouses which this handbook illustrates This has provided the means to collect store and process mobility data of an unprecedented quantity quality and timeliness As ubiquitous computing pervades our society user mobility data represents a very useful but also extremely sensitive source of information On one hand the movement traces that are left behind by the

mobile devices of the users can be very useful in a wide spectrum of applications such as urban planning traffic engineering and environmental pollution management On the other hand the disclosure of mobility data to third parties may severely jeopardize the privacy of the users whose movement is recorded leading to abuse scenarios such as user tailing and profiling A significant amount of research work has been conducted in the last 15 years in the area of mobility data privacy and important research directions such as privacy preserving mobility data management privacy in location sensing technologies and location based services privacy in vehicular communication networks privacy in location based social networks privacy in participatory sensing systems which this handbook addresses This handbook also identifies important privacy gaps in the use of mobility data and has resulted to the adoption of international laws for location privacy protection e g in EU US Canada Australia New Zealand Japan Singapore as well as to a large number of interesting technologies for privacy protecting mobility data some of which have been made available through open source systems and featured in real world applications

Smart Homes and Health Telematics Abdelsalam (Sumi) Helal, Simanta Mitra, Johnny Wong, Carl K. Chang, Mokhtari Mounir, 2008-06-21 We often conceptualize that older adults retire into a life of carefree luxury among palm trees golf courses and pristine beaches Unfortunately reality differs today many retire in place and often it is the case they retire in rural areas far from hospitals and care giving centers For instance over half of the older population in the state of Minnesota lives in small towns away from the center of care which is Minneapolis St Paul This year ICOST 2008 aimed at focusing on this important reality and on gerontechnology the use of technology to enhance the quality of life of older adults in rural lands We had a strong technical program this year spanning many critical topics including remote monitoring and tele care access control and privacy preservation understanding user requirements and needs autonomous learning and reasoning about user behavior activities and contexts user interface design middleware for sensing and actuation in smart homes cognitive assistants context aware service provisioning among other topics We received a total of 54 submissions of papers abstracts and posters from 14 different countries Through a blind review process we accepted 24 full papers 9 abstracts and 7 posters Each submission received two or three reviews with the exception of a few that received four reviews We are thankful to all the reviewers who helped in the review process including members of the Technical Committee and the additional reviewers that we needed to compensate for unreturned reviews
