How to Think about Information Dan Schiller, 2024-04-22 It is common wisdom that the U S economy has adapted to losses in its manufacturing base because of the booming information sector with high paying jobs for everything from wireless networks to video games We are told we live in the Information Age in which communications networks and media and information services drive the larger economy While the Information Age may have looked sunny in the beginning as it has developed it looks increasingly ominous its economy and benefits grow more and more centralized and in the United States it has become less and less subject to democratic oversight Corporations around the world have identified the value of information and are now seeking to control its production transmission and consumption In How to Think about Information Dan Schiller explores the ways information has been increasingly commodified as a result and how it both resembles and differs from other commodities Through a linked series of theoretical historical and contemporary studies Schiller reveals this commodification as both dynamic and expansionary but also deeply conflicted and uncertain He examines the transformative political and economic changes occurring throughout the informational realm and analyzes key dimensions of the process including the buildup of new technological platforms the

growth of a transnationalizing culture industry and the role played by China as it reinserts itself into an informationalized capitalism

The Debates Shaping Spectrum Policy Martin Sims, 2021-12-23 What debates have caused spectrum policy to change course and which will determine its future direction This book examines these issues through a series of chapters from a range of notable experts The backdrop is a period of turbulent change in what was once a quiet backwater The past quarter century has seen wireless connectivity go from nice to have luxury to the cornerstone of success as nations battle for leadership of the digital economy The change has been reflected in the crucial role now played by market mechanisms in a field once dominated by administrative decisions Spectrum policy's goals have moved far beyond the efficient use of the airwaves to include encouraging economic development investment innovation sustainability and digital inclusivity Are historic procedures still appropriate in the face of this multiplicity of demands Are market mechanisms like auctions still the best way to deliver what has become essential infrastructure Does the process of international coordination need to change Is spectrum policy's effectiveness limited by the power of global economic forces Can it reduce rather than add to global warming Where does 6G and AI fit in Is public perception the new spectrum policy battle ground These are all issues examined in **The Debates Shaping Spectrum Policy**

Metropolitan Organising Capacity Leo van den Berg, Erik Braun, Jan van der Meer, 2018-08-10 Published in 1997 The environment of cities has become increasingly competitive Tradition location factors that once tied economic activities firmly to particular areas have become less important Increasingly the ability of a city to anticipate respond to and cope with internal and external changes is getting attention Organizing capacity of cities or of metropolitan regions is becoming indispensable for sustainable economic and social development The authors have carried out investigations into eight European cities to increase the insight into the practice of organizing capacity The analysis of the development and implementation of 15 revitalization projects in these cities shows that organizing capacity calls for a new style of entrepreneurial urban management with public and private networking leadership long term strategies and organizing political and public support as key concepts

Demand for Communications Services - Insights and Perspectives James Alleman, Áine Marie Patricia Ní-Shúilleabháin, Paul N. Rappoport, 2013-10-07 This volume grew out of a conference organized by James Alleman and Paul Rappoport conducted on October 10 2011 in Jackson Hole Wyoming in honor of the work of Lester D Taylor whose pioneering work in demand and market analysis has had profound implications on research across a wide spectrum of industries In his Prologue Eli M Noam notes that demand analysis in the information sector must recognize the public good characteristics of media products and networks while taking into account the effects of interdependent user behavior the strong cross elasticities in a market as well as the phenomenon of supply creating its own demand The second Prologue by Timothy Tardiff and Daniel Levy focuses more specifically on Taylor's body of work in particular its practical applications and usefulness in analyses of and practices within the Information and Communications Technology ICT sector known in Europe and elsewhere as the

Telecommunications Media and Technology TMT sector The remainder of the book is organized into four parts Advances in Theory Empirical Applications Evidence Based Policy Applications and a final Conclusion The book closes with an Appendix by Sharon Levin and Stanford Levin detailing Taylor s contributions using bibliometrics Not only featuring chapters from distinguished scholars in economics applied sciences and technology this volume includes two contributions directly from Lester Taylor providing unique insight into economics from a lifetime in the field What a worthy book Every applied researcher in communications encounters Lester Taylor s work Many empirical exercises in communications can trace their roots to Taylor s pioneering research and his thoughtful leadership This book assembles an impressive set of contributors and contributions to honor Taylor No surprise the collection extends far and wide into many of the core topics of communications and media markets The emphasis is where it should be on important and novel research questions informed by useful data Shane Greenstein Professor of Management and Strategy Kellogg School of Management Northwestern University For more than 40 years Lester Taylor has been a leader in the application of consumer modeling econometric techniques and microeconomic data to understand residential and business user behavior in telecommunications markets During that time he inspired a cadre of students and colleagues who applied this potent combination to address critical corporate and regulatory issues arising in the telecommunications sector This volume collects the recent product of many of these same researchers and several other devotees who go beyond empirical analysis of fixed line service by extending Prof Taylor s approach to the next wave of services and technologies These contributions including two new papers by Prof Taylor offer an opportunity for the next generation to learn from his work as it grapples with the pressing issues of consumer demand in the rapidly evolving digital economy Glenn Woroch Adjunct Professor of Economics University of California Berkeley

Communications Policy in Transition Benjamin M. Compaine, Shane M. Greenstein, 2001 A collection of research reports on policy issues involving telecommunications particularly the Internet Until the 1980s it was presumed that technical change in most communications services could easily be monitored from centralized state and federal agencies This presumption was long outdated prior to the commercialization of the Internet With the Internet the long forecast convergence of voice video and text bits became a reality Legislation capped by the Telecommunications Act of 1996 created new quasi standards such as fair and reasonable for the FCC and courts to apply leading to nonstop litigation and occasional gridlock This book addresses some of the many telecommunications areas on which public policy makers corporate strategists and social activists must reach agreement Topics include the regulation of access Internet architecture in a commercial era communications infrastructure development the Digital Divide and information policy issues such as intellectual property and the retransmission of TV programming via the Internet
