**Apocalyptic AI: Visions of Heaven in Robotics, Artificial Intelligence, and Virtual Reality** Robert M. Geraci, 2010-02-05 Apocalyptic AI the hope that we might one day upload our minds into machines or cyberspace and live forever is a surprisingly wide spread and influential idea affecting everything from the world view of online gamers to government research funding and philosophical thought In Apocalyptic AI Robert Geraci offers the first serious account of this cyber theology and the people who promote it Drawing on interviews with roboticists and AI researchers and with devotees of the online game Second Life among others Geraci illuminates the ideas of such advocates of Apocalyptic AI as Hans Moravec and Ray Kurzweil He reveals that the rhetoric of Apocalyptic AI is strikingly similar to that of the apocalyptic traditions of Judaism and Christianity In both systems the believer is trapped in a dualistic universe and expects a resolution in which he or she will be translated to a transcendent new world and live forever in a glorified new body Equally important Geraci shows how this worldview shapes our culture Apocalyptic AI has become a powerful force in modern culture In this superb volume he shines a light on this belief system revealing what it is and how it is changing society

**"Science, Technology, and Utopias "** Christine Filippone, 2017-07-05 The rise of proxy wars the Space Race and cybernetics during the Cold War marked science and technology as vital sites of social and political power Women artists historically excluded from these domains responded critically while simultaneously redeploying the products of Technological Society into works that promoted ideals of progress and alternative concepts of human community In this innovative book author Christine Filippone offers the first focused examination of the conceptual use of science and technology by women artists during and just after the women's movement She argues that artists Alice

Aycock Agnes Denes Martha Rosler and Carolee Schneemann used science and technology to mount a critique on Cold War American society as they saw it conservative and constricting Motivated by the contemporary American Women s Movement these artists transformed science and technology into new modes of artmaking that transgressed modernist heroic painterly styles and subverted the traditional economic structures of the gallery the museum and the dealer At the same time the artists also embraced these domains of knowledge and practice as expressions of hope for a better future Many found inspiration in the scientific theory of open systems which investigated problems of wholeness dynamic interaction and organization enabling consideration of the porous boundaries between human bodies and their social political and nonhuman environments Filippone also establishes that the theory of open systems not only informed feminist art but also continued to influence women artists practice of reclamation and ecological art through the twenty first century
