Image and Geometry Processing for 3-D Cinematography Rémi Ronfard, Gabriel Taubin, 2010-06-29 papers illustrated with examples They include wavelet bases implicit functions defined on a space grid etc It appears that a common pattern is the recovery of a controllable model of the scene such that the resulting images can be edited interaction Changing the viewpoint is only one important aspect but changing the lighting and action is equally important 2 Recording and representing three dimensional scenes is an emerging technology made possible by the convergence of optics geometry and computer science with many applications in the movie industry and more generally in entertainment Note that the invention of cinema camera and projector was also primarily a scientific invention that evolved into an art form We suspect the same thing will probably happen with 3 D movies 3 Book Contents The book is composed of 12 chapters which elaborate on the content of talks given at the BANFF workshop The chapters are organized into three sections The first section presents an overview of the inter relations between the art of cinematography and the science of image and geometry processing the second section is devoted to recent developments in geometry and the third section is devoted to recent developments in image processing 3 1 3 D Cinematography and Applications The first section of the book presents an overview of the inter relations between the art of cinematography and the science of image and geometry processing

Generating Images of Stratification Thomas J. Fararo, Kenji Kosaka, 2003-08-31 Generating Images of Stratification is a self contained presentation of a theoretical research program that deals with a significant explanatory problem relating to social inequality and that constructs generative theoretical models in doing so In more detail Self contained presentation In respect to the background sociological facts and theoretical ideas and also the formal methods the book provides clear and simple accounts accompanied by examples A theoretical research program The emphasis is on theory development involving a series of theoretical models constructed within a core framework of principles and methods Deals with a significant explanatory problem relating to social inequality We know from research that how people perceive the stratification system of a society depends upon their position in that system So the problem is What process generates this regularity and thereby explains empirical generalizations about the social structuration of images Constructs generative theoretical models The book is an extended presentation of generative theory in sociology a formal method of producing effective theoretical explanations Generating Images of Stratification is of interest to mathematical sociologists and formal theorists in sociology sociologists interested in social stratification methodologists both in sociology and in other fields philosophers of social science and theoretical scientists and mathematicians who are interested in applying their analytical tools to social science topics
