Reflections On A Theory Of Organisms:

Reflections on a Theory of Organisms Walter M. Elsasser,1987 Reflections on a Theory of Organisms Walter M. Elsasser,1998-10-16 In a thought provoking and controversial work first published in 1987 eminent geophysicist Walter M Elsasser argues that the behavior of living organisms cannot be reduced to physico chemical causality Suggesting that molecular biology today is at the same point as Newtonian physics on the eve of the quantum revolution Elsasser lays the foundation for a theoretical biology that points the way toward a natural philosophy of organic life **God and Gravity** Philip Clayton,2018-08-23 Philip Clayton is well known as a major thinker working at the interface of science philosophy and Christian theology Here for the first time a representative selection of his far reaching works have been brought together into one place After a general introduction to the breadth of Clayton s writing the book is divided into six main sections 1 Science 2 Science Faith 3 Panentheistic Reflections on Science 4 Science 5 Science Spirit and 6 Progressive Theology This introduction and reader will become the go to text for all inquiries regarding Philip Clayton s expansive theology

Biocivilisations Predrag Slijepcevic,2023-05-18 Biocivilisations is a fascinating original and important exploration into how complex civilisations existed on Earth long before humans What is life This is arguably the most important question in all of science Many scientists believe life can be reduced to mechanistic factors such as genes and information codes Everything can be sequenced and explained But in a world as rich and complex as this one can such an assertion really be true A growing army of scientists philosophers and artists do not share this mechanistic vision for the science of life The gene metaphor is not only too simplistic but also misleading If there is a way to reduce life to a single principle how does that principle acknowledge the creativity of life that turns both genetic and information determinism on their heads Biocivilisations is a groundbreaking book exploring the mysteries of life and its deep uncertainty Dr Predrag Slijepevi turns anthropocentric scientific thinking on its head showing how the humble bacteria created the equivalent of cities and connected them with information highways bringing our planet to life three thousand million years ago He explains how bacteria amoebas plants insects birds whales elephants and countless other species not only preceded human beings but also demonstrate elements of complex civilisation communication agriculture science art medicine and more that we associate with human achievement More than 99 99 percent of life on Earth has existed without humanity and life will continue without humans long into the future Biocivilisations is an important rethinking of the current scientific paradigm It challenges us to reconsider the limited scope and time window of our current scientific revolution and to fundamentally reimagine what we call life on Earth **Extreme Events in Nature and Society** Sergio Albeverio,Volker Jentsch,Holger Kantz,2006-02-18 Significant and usually unwelcome surprises such as floods financial crisis epileptic seizures or material rupture are the topics of Extreme Events in Nature and Society The book authored by foremost experts in these fields reveals unifying and distinguishing features of extreme events including problems of understanding and modelling their origin

spatial and temporal extension and potential impact The chapters converge towards the difficult problem of anticipation forecasting the event and proposing measures to moderate or prevent it Extreme Events in Nature and Society will interest not only specialists but also the general reader eager to learn how the multifaceted field of extreme events can be viewed as a coherent whole

Back To Darwin John B. Cobb, 2008-02-04 This book provides a distinctive radical way beyond the quarrels between evolutionary science and Christian belief Leading scientists philosophers and theologians critically discuss the metaphysical assumptions of neo Darwinism and offer concrete ways of broadening mainstream evolutionary theory Their open exchange moderated by veteran process theologian John B Cobb presents a holistic case for evolution that both theists and nontheists can accept Contributors Francisco J Ayala Ian G Barbour Charles Birch Philip Clayton John B Cobb Jr John Greene David Ray Griffin A Y Gunter John F Haught Lynn Margulis Reg Morrison Dorion Sagan Jeffrey Schloss Robert J Valenza Howard J Van Till

Functions: From Organisms to Artefacts Jean Gayon, Armand de Ricqlès, Antoine C. Dussault, 2023-07-25 This book originally published in French examines the philosophical debates on functions over the last forty years and proposes new ways of analysis Pervasive throughout the life sciences the concept of function has the air of an epistemological scandal ascribing a function to a biological structure or process amounts to suggesting that it is explained by its effects This book confronts the debates on function with the use of the notion in a wide range of disciplines such as biology psychology and medicine It also raises the question of whether this notion which is as old in the history of technology as it is in the life sciences has the same meaning in these two domains

The Oxford Handbook of English Prose 1500-1640 Andrew Hadfield, 2013-07-04 The Oxford Handbook of English Prose 1500 1640 is the only available overview of early modern English prose writing It considers the range and variety of the substance and types of English prose and also analyses the forms and styles of writing adopted in the early modern period
