Returning Home:

Returning Home Jerry M. Burger, 2011-03-16 Each year millions of American adults visit a childhood home Few can anticipate the effect it will have on them Often serving several important psychological needs these trips are not intended as visits with people from their past Rather those returning to their homes have a strong desire to visit the places that comprised the landscape of their childhood Approximately one third of American adults over the age of thirty have visited a childhood home This book describes some of their experiences and the psychology behind the journeys Most people who visit a childhood home are motivated by a desire to connect with their past Seeing the buildings schools parks and playgrounds from their youth helps to establish the psychological and emotional link between the child in the black and white photographs and the person they are today Many people use the trip to get in touch with the values and principles they were taught as children often as a means to get their lives back on track Others use that journey to strengthen emotional bonds between themselves and loved ones Still others return to former homes to work through psychological issues left over from sad or traumatic childhoods No matter the reason there are few experiences in one's life that can move a person as deeply and unpredictably as returning home

Returning Home from Iraq and Afghanistan Institute of Medicine,Board on the Health of Select Populations,Committee on the Assessment of Readjustment Needs of Military Personnel, Veterans, and Their Families,2013-04-12 As of December 2012 Operation Enduring Freedom OEF in Afghanistan and Operation Iraqi Freedom OIF in Iraq have resulted in the deployment of about 2 2 million troops there have been 2 222 US fatalities in OEF and Operation New Dawn OND 1 and 4 422 in OIF The numbers of wounded US troops exceed 16 000 in Afghanistan and 32 000 in Iraq In addition to deaths and morbidity the operations have unforeseen consequences that are yet to be fully understood In contrast with previous conflicts the all volunteer military has experienced numerous deployments of individual service members has seen increased deployments of women parents of young children and reserve and National

Guard troops and in some cases has been subject to longer deployments and shorter times at home between deployments. Numerous reports in the popular press have made the public aware of issues that have pointed to the difficulty of military personnel in readjusting after returning from Iraq and Afghanistan. Many of those who have served in OEF and OIF readjust with few difficulties but others have problems in readjusting to home, reconnecting with family members, finding employment, and returning to school. In response to the return of large numbers of veterans from Iraq and Afghanistan with physical health and mental health problems and to the growing readjustment needs of active duty service members, veterans, and their family members, Congress included Section 1661 of the National Defense Authorization Act for fiscal year 2008. That section required the secretary of defense in consultation with the secretary of veterans affairs to enter into an agreement with the National Academies for a study of the physical health, mental health, and other readjustment needs of members and former members of the armed forces who were deployed in OIF or OEF, their families, and their communities as a result of such deployment. The study consisted of two phases. The Phase 1 task was to conduct a preliminary assessment. The Phase 2 task was to provide a comprehensive assessment of the physical, psychological, social, and economic effects of deployment on and identification of gaps in care for members and former members, their families, and their communities. The Phase 1 report was completed in March 2010 and delivered to the Department of Defense (DOD), the Department of Veterans Affairs (VA), and the relevant committees of the House of Representatives and the Senate. The secretaries of DOD and VA responded to the Phase 1 report in September 2010. **Returning Home from Iraq and Afghanistan: Assessment of Readjustment Needs of Veterans Service Members and Their Families** fulfills the requirement for Phase 2.

Returning Wars' Wounded, Injured, and Ill

Nathan D. Ainspan Ph.D., Walter E. Penk, 2008-09-30

Thousands of American service members are returning from their tours of duty with physical and/or psychological disabilities. Many if not most of these service members will need at least some assistance to adapt to their disabilities and learn how to reintegrate back into civilian life. Also impacted will be the spouse, friends, employers, family members, counselors, and community members of each veteran with a disability. The veterans may not be aware of the ways in which their disabilities are impacting them, nor knowledgeable about the resources available to help them cope. In addition, many such individuals feel isolated and reluctant to acknowledge their difficulties or ask for assistance. The volume compiles and summarizes the information disabled veterans and those with whom they interact will be interested in knowing and using. It describes how disabilities can impact an individual physically, psychologically, and spiritually. It also provides a context of these disabilities to reassure the readers that they are not alone in the thoughts, feelings, and pain, and that others have experienced the same problems and found solutions. The work provides guidance on different forms of treatment that may help the veteran and includes a list of contact information for local VA centers, peer-to-peer counseling services, and other programs, services, and individuals available frequently for free for veterans and their families. Brief biographies of disabled veterans and case studies of the ways they reintegrated back into civilian society.
