## Revenge Of Gaia:

**The Revenge of Gaia** James Lovelock, 2007-08-02 In *The Revenge of Gaia* bestselling author James Lovelock father of climate studies and originator of the influential Gaia theory which views the entire earth as a living meta organism provides a definitive look at our imminent global crisis In this disturbing new book Lovelock guides us toward a hard reality soon we may not be able to alter the oncoming climate crisis Lovelock's influential Gaia theory one of the building blocks of modern climate science conceives of the Earth including the atmosphere oceans biosphere and upper layers of rock as a single living super organism regulating its internal environment much as an animal regulates its body temperature and chemical balance But now says Lovelock that organism is sick It is running a fever born of the combination of a sun whose intensity is slowly growing over millions of years and an atmosphere whose greenhouse gases have recently spiked due to human activity Earth will adjust to these stresses but on time scales measured in the hundreds of millennia It is already too late Lovelock says to prevent the global climate from flipping into an entirely new equilibrium state that will leave the tropics uninhabitable and force migration to the poles *The Revenge of Gaia* explains the stress the planetary system is under and how humans are contributing to it what the consequences will be and what humanity must do to rescue itself

**The Revenge of Gaia** James Lovelock, 2006 *The Revenge of Gaia* James Lovelock, 2006 The originator of the Gaia Theory argues that the Earth is a self regulating superorganism whose balance has been upset by the impact of global warming and that the resulting climate change could have dire results for human civilization *The Revenge of Gaia Why the Earth is Fighting Back - and How We Can Still Save Humanity*, 2007 James Lovelock one of the giants of environmental thinking argues passionately and poetically that although global warming is now inevitable we are not yet too late to save at least part of human civilization Not only is mankind on the brink of destroying itself and the Earth he argues but most of the alternative remedies that have been proposed or are already being adopted are also misguided We must take drastic action now to safeguard the future of human life

**The Vanishing Face of Gaia** James Lovelock, 2010-04-27 A preeminent environmental scientist contends that it's too late to reverse global warming and argues that mankind must prepare to adapt to a very hot future

**The Really**

Origin of Species      **After the Car** Kingsley Dennis, John Urry, 2013-05-20 It is difficult to imagine a world without the car and yet that is exactly what Dennis and Urry set out to do in this provocative new book They argue that the days of the car are numbered powerful forces around the world are undermining the car system and will usher in a new transport system sometime in the next few decades Specifically the book examines how several major processes are shaping the future of how we travel including Global warming and its many global consequences Peaking of oil supplies Increased digitisation of many aspects of economic and social life Massive global population increases The authors look at changes in technology policy economy and society and make a convincing argument for a future where by necessity the present car system will be re designed and re engineered Yet the book also suggests that there are some hugely bleak dilemmas facing the twenty first century The authors lay out what they consider to be possible post car future scenarios These they describe as local sustainability regional warlordism and digital networks of control After The Car will be of great interest to planners policy makers social scientists futurologists those working in industry as well as general readers Some have described the 20th Century as the century of the car Now that century has come to a close and things are about to change      **Aesthetics of Universal Knowledge** Simon Schaffer, John Tresch, Pasquale Gagliardi, 2017-05-15 Born out of a major international dialogue held at the Fondazione Giorgio Cini in Venice Italy this collection of essays presents innovative and provocative arguments about the claims of universal knowledge schemes and the different aesthetic and material forms in which such claims have been made and executed Contributors take a close look at everything from religious pilgrimages museums and maps of the world to search engines and automated GPS Current obsessions in information technology communications theory and digital culture often concern the value and possibility of a grand accumulation of universally accessible forms of knowledge total libraries open data bases ubiquitous computing and smart technologies These obsessions have important social and philosophical origins and they raise profound questions about the very nature of knowledge and its organization This volume s contributors draw on the histories of maps and of encyclopedias worldviews and visionary collections to make sense of the crucial relation between the way the world is known and how it might be displayed and transformed      *Global Environmental Policy* Charles H. Eccleston, Frederic March, 2011-06-27 Environmental policy is often practiced reactively with each crisis addressed as an isolated event Focusing on development of proactive policies Global Environment Policy Concepts Principles and Practice provides the essential scientific and socioeconomic framework for formulating pragmatic and comprehensive environmental policies It discusses topics of interest to American and international audiences Beginning with basic concepts the book proceeds successively on to more advanced principles theories and practices for developing and implementing comprehensive environmental policy solutions Topics are introduced in a logical yet connected user friendly manner Using practical case studies and examples the book illustrates both the power and limitations of theoretical approaches It defines the scope and nature of the environmental policy problem outlining its origins and evolution and

introduces the policy frameworks of the United Nations European Union and the United States Each chapter begins with a case study and ends with a problem set the questions are designed to elicit practical and critical thinking The book ends with two capstone problems that exemplify nearly every major topic and aspect presented in this book Upon completion students should possess the competency required to examine a real world problem evaluate it in terms of the concepts principles and tools described throughout the book and develop a practical policy solution for resolving that problem

*The Democracy of Suffering* Todd Dufresne, 2019-09-12 In *The Democracy of Suffering* philosopher Todd Dufresne provides a strikingly original exploration of the past present and future of this epoch the Anthropocene demonstrating how the twin crises of reason and capital have dramatically remade the essential conditions for life itself Images cartoons artworks and quotes pulled from literary and popular culture supplement this engaging and unorthodox look into where we stand amidst the ravages of climate change and capitalist economics With humour passion and erudition Dufresne diagnoses a frightening new reality and proposes a way forward arguing that our serial experiences of catastrophic climate change herald an intellectual and moral awakening one that lays the groundwork albeit at the last possible moment for a future beyond individualism hate and greed That future is unapologetically collective It begins with a shift in human consciousness with philosophy in its broadest sense and extends to a reengagement with our greatest ideals of economic social and political justice for all But this collective future Dufresne argues is either now or never Uncovering how we got into this mess and how if at all we get out of it *The Democracy of Suffering* is a flicker of light or perhaps a scream in the face of human extinction and the end of civilization

**Errant Natures and Wayward Bodies in Late-Victorian Speculative Fiction** Adrian Tait, 2025-09-04 Adrian Tait argues that late Victorian stories represent an important but still neglected part of a green literary tradition setting up a dialogue with modernity that is no less relevant today Late Victorian literature is full of fascinating examples of what was then called the scientific romance an emerging form of science or speculative fiction whose concern with the liveliness or agentiality of the nonhuman animal and more than human natural world today makes it particularly noteworthy In a succession of short stories and novels many now forgotten writers such as Grant Allen John Davidson George Griffith and Henry Marriott Watson dramatized the possibility that Nature had not been conquered by industrial modernity but might instead be reacting to it with an unexpected dynamism Long before environmental issues such as climate change came to the public's attention they asked whether humankind might one day inadvertently create existential threats to its own survival In so doing these pioneers of sf depicted their world in terms that anticipate the recent new materialist focus on a mutable and dynamic reality responsive and perhaps resistant to human endeavor

[Perspectives on Ecocriticism](#) Ingemar Haag, Karin Molander Danielsson, Marie Öhman, 2019-05-08 This volume gathers together papers presented at the conference Ecocriticism in the Nordic Countries Yesterday Today Tomorrow held in Västerås Sweden in 2017 organized by the research group Ecocritical Forum at Mälardalen University The conference which was an attempt to survey local ecocritical activities

transcended Nordic boundaries engaging scholars from Europe and the United States This expansion from the local to the global mirrors the subject of the conference ecocriticism a cross disciplinary field of research in the intersection of environmental issues and cultural expressions The chapters here engage with topical issues such as the Anthropocene sustainability in education and civilizational critique as well as schools of thought such as materialism dark ecology and animal studies The contributions discuss several types of cultural expressions including film and other visual media university course design and Nordic and English language novels and poetry This volume will attract the interest of readers from a number of different backgrounds both in the Nordic countries and internationally *Killer Apps* Jeremy

Packer, Joshua Reeves, 2020-02-28 In *Killer Apps* Jeremy Packer and Joshua Reeves provide a detailed account of the rise of automation in warfare showing how media systems are central to building weapons systems with artificial intelligence in order to more efficiently select and eliminate military targets Drawing on the insights of a wide range of political and media theorists Packer and Reeves develop a new theory for understanding how the intersection of media and military strategy drives today's AI arms race They address the use of media to search for enemies in their analyses of the history of automated radar systems the search for extraterrestrial life and the development of military climate science which treats the changing earth as an enemy As the authors demonstrate contemporary military strategy demands perfect communication in an evolving battlespace that is increasingly inhospitable to human frailties necessitating humans replacement by advanced robotics machine intelligence and media systems Routledge Handbook of the History of Sustainability Jeremy L.

Caradonna, 2017-10-18 The *Routledge Handbook of the History of Sustainability* is a far reaching survey of the deep and contemporary history of sustainability This innovative resource will help to define the history of sustainability as an identifiable field It provides a unique resource for advanced undergraduates graduate students and scholars and delivers essential context for understanding the current state and future path of the sustainability movement The history of sustainability is an increasingly important domain within the discipline of history which draws on an interdisciplinary set of fields ranging from energy studies transportation and urbanism to environmental history economics and philosophy Key sections in this handbook cover the historiography of sustainability resilience and collapse in historical societies the deep roots of sustainability seventeenth century to nineteenth century the recent history of sustainability twentieth century to present and core issues and key debates in sustainability This handbook is an invaluable research and teaching tool for those interested in the history and development of sustainability and an essential resource for the many sustainability studies programs that now exist in the world's universities **Placing Nature on the Borders of Religion, Philosophy and**

**Ethics** Dr Forrest Clingerman, Mr Mark H Dixon, 2013-06-28 The natural world has been humanized even areas thought to be wilderness bear the marks of human impact But this human impact is not simply physical At the emergence of the environmental movement the focus was on human effects on nature More recently however the complexity of the term nature

has led to fruitful debates and the recognition of how human individuals and cultures interpret their environments This book furthers the dialogue on religion ethics and the environment by exploring three interrelated concepts to recreate to replace and to restore Through interdisciplinary dialogue the authors illuminate certain unique dimensions at the crossroads between finding value creating value and reflecting on one's place in the world Each of these terms has diverse religious ethical and scientific connotations Each converges on the ways in which humans both think about and act upon their surroundings And each radically questions the damaging conceptual divisions between nature and culture human and environment and scientific explanation and religious ethical understanding This book self consciously reflects on the intersections of environmental philosophy environmental theology and religion and ecology stressing the importance of how place interprets us and how we interpret place In addition to its contribution to environmental philosophy this work is a unique volume in its serious engagement with theology and religious studies on the issues of ecological restoration and the meaning of place

**End of the World** Jon Mills, 2024-06-04 Famine Extreme climate change Threats of global war and nuclear annihilation Obscene wealth disparities Is civilization destined for self annihilation In this timely book philosopher and psychoanalyst Jon Mills explores the emergencies that could ignite an apocalypse As we idly stand by in the face of ecological economic and societal collapse we must seriously question whether humanity is under the sway of a collective unconscious death wish Examining ominous existential risks and drawing on the psychological motivations unconscious conflicts and cultural complexes that drive human behavior and social relations he offers fresh new perspectives on the looming fate of humanity based on a collective bystander disorder End of the World is a warning about the dangerous precipice we find ourselves careening toward and a call to action to take control of our own fate
