Medical Image Computing and Computer-Assisted Intervention - MICCAI 2002 Takeyoshi Dohi, Ron Kikins, 2003-06-30 The fifth international Conference in Medical Image Computing and Computer Assisted Intervention MICCAI 2002 was held in Tokyo from September 25th to 28th 2002 This was the first time that the conference was held in Asia since its foundation in 1998 The objective of the conference is to offer clinicians and scientists the opportunity to collaboratively create and explore the new medical field Specifically MICCAI offers a forum for the discussion of the state of art in computer assisted interventions medical robotics and image processing among experts from multi

disciplinary professions including but not limited to clinical doctors computer scientists and mechanical and biomedical engineers The expectations of society are very high the advancement of medicine will depend on computer and device technology in coming decades as they did in the last decades We received 321 manuscripts of which 41 were chosen for oral presentation and 143 for poster presentation Each paper has been included in these proceedings in eight page full paper format without any differentiation between oral and poster papers Adherence to this full paper format along with the increased number of manuscripts surpassing all our expectations has led us to issue two proceedings volumes for the first time in MICCAI s history Keeping to a single volume by assigning fewer pages to each paper was certainly an option for us considering our budget constraints However we decided to increase the volume to offer authors maximum opportunity to argue the state of art in their work and to initiate constructive discussions among the MICCAI audience

State of the Art in Digital Mammographic Image Analysis K. W. Bowyer, S. Astley, 1994 This book provides a detailed assessment of the state of the art in automated techniques for the analysis of digital mammogram images Topics covered include a variety of approaches for image processing and pattern recognition aimed at assisting the physician in the task of detecting tumors from evidence in mammogram images The chapters are written by recognized experts in the field and are revised versions of papers selected from those presented at the First International Workshop on Mammogram Image Analysis held in San Jose as part of the 1993 Biomedical Image Processing conference

Handbook of Medical Image Computing and Computer Assisted Intervention S. Kevin Zhou, Daniel Rueckert, Gabor Fichtinger, 2019-10-18 Handbook of Medical Image Computing and Computer Assisted Intervention presents important advanced methods and state of the art research in medical image computing and computer assisted intervention providing a comprehensive reference on current technical approaches and solutions while also offering proven algorithms for a variety of essential medical imaging applications This book is written primarily for university researchers graduate students and professional practitioners assuming an elementary level of linear algebra probability and statistics and signal processing working on medical image computing and computer assisted intervention Presents the key research challenges in medical image computing and computer assisted intervention Written by leading authorities of the Medical Image Computing and Computer Assisted Intervention MICCAI Society Contains state of the art technical approaches to key challenges Demonstrates proven algorithms for a whole range of essential medical imaging applications Includes source codes for use in a plug and play manner Embraces future directions in the fields of medical image computing and computer assisted intervention

Adaptive Motion Compensation in Radiotherapy Martin J. Murphy,2011-12-14 External beam radiotherapy has long been challenged by the simple fact that patients can and do move during the delivery of radiation Recent advances in imaging and beam delivery technologies have made the solution adapting delivery to natural movement a practical reality Adaptive Motion Compensation in Radiotherapy provides the first detailed treatment of online interventional techniques for motion compensation radiotherapy This authoritative book discusses Each of the contributing elements of a motion adaptive system including target detection and tracking beam adaptation and patient realignment Treatment planning issues that arise when the patient and internal target are mobile Integrated motion adaptive systems in clinical use or at advanced stages of development System control functions essential to any therapy device operating in a near autonomous manner with limited human interaction Necessary motion detection methodology repositioning techniques and approaches to interpreting and responding to target movement data in real time Medical therapy with external beams of radiation began as a two dimensional technology in a three dimensional world However in all but a limited number of scenarios movement introduces the fourth dimension of time to the treatment problem Motion adaptive radiation therapy represents a truly four dimensional solution to an inherently four dimensional problem From these chapters readers will gain not only an understanding of the technical aspects and capabilities of motion adaptation but also practical clinical insights into planning and carrying out various types of motion adaptive radiotherapy treatment
