Complex Adaptive Systems Ted Carmichael, Andrew J. Collins, Mirsad Hadžikadić, 2019-06-14 This book emerged out of international conferences organized as part of the AAAI Fall Symposia series and the Swarmfest 2017 conference It brings together researchers from diverse fields studying these complex systems using CAS and agent based modeling tools and techniques In the past the knowledge gained in each domain has largely remained exclusive to that domain By bringing together scholars who study these phenomena the book takes knowledge from one domain to provide insight into others Most interesting phenomena in natural and social systems include constant transitions and oscillations among their various phases wars companies societies markets and humans rarely stay in a stable predictable state for long Randomness power laws and human behavior ensure that the future is both unknown and challenging How do events unfold When do they take hold Why do some initial events cause an avalanche while others do not What characterizes these events What are the thresholds that differentiate a sea change from a non event Complex adaptive systems CAS have proven to be a powerful tool for exploring these and other related phenomena The authors characterize a general CAS model as having a large number of self similar agents that 1 utilize one or more levels of feedback 2 exhibit emergent properties and self organization and 3 produce non linear dynamic behavior Advances in modeling and computing technology have led not only to a deeper understanding of complex systems in many areas but they have also raised the possibility that similar fundamental principles may be at work across these systems even though the underlying principles may manifest themselves differently
