Sacrificing The Salmon A Legal Policy:

Sacrificing the Salmon Michael C. Blumm, 2013-07 Pacific salmon are the paramount cultural and spiritual symbol of the Pacific Northwest. Since the beginning of human habitation, salmon have been central to subsistence, trade, and even religion. The natives of the region considered salmon so crucial to their way of life that they bargained in 1850s treaties to continue to harvest a share of the salmon runs in return for ceding to the United States the lands that now form the states of Idaho, Oregon, and Washington. A century and a half later, because of their environmental sensitivity, Pacific salmon runs from California to Alaska function as barometers of the health of the watersheds they inhabit. Their decline throughout the twentieth century is a reflection of the deterioration of Pacific Northwest watersheds. In this book, Professor Michael Blumm explains the role of the law in the decline of what were once the largest of the Pacific salmon runs: those of the Columbia Basin. The Columbia Basin is home to the largest interconnected hydroelectric power system in the world, considerable irrigation withdrawals, and extensive timber harvesting, grazing, and mining. All of these activities, along with substantial harvests in the ocean and the river, have adversely affected Columbia Basin salmon runs. As a result, the salmon runs, especially wild salmon, are now only a fraction of what they once were. Professor Blumm examines several unsuccessful promises to protect or restore the salmon runs, beginning with the Indian treaties of the 1850s and including a century of hatchery operations which aimed to compensate for habitat loss due to hydroelectric and other developments. These promises, as well as those made by the Northwest Power Act, the Pacific Salmon Treaty, the Endangered Species Act, the Clean Water Act, and the Federal Power Act, proved unable to reverse the decline of Columbia Basin salmon. *Sacrificing the Salmon* explains why these efforts failed and examines the prospects for the future. Professor Blumm is pessimistic about the capability of ongoing restoration programs under the Endangered Species Act and the Northwest Power Act to achieve their goals, because those programs are committed to a status quo of river operations that is the cause of roughly 80 percent of human-caused salmon mortalities. He believes that more therapeutic courses of action lie in litigation concerning the tribes' treaty rights and in efforts to breach several dams on the Lower Snake River, and he explains why. *Sacrificing the Salmon* examines all of these issues in the complicated relationship of the law and the decline of Columbia Basin salmon, the first book to do so. There are several lessons in this case study which may be applicable to other resources in other regions, and a concluding chapter of the book draws them. About the author: Michael C. Blumm is Professor of Law at Northwestern School of Law of Lewis and Clark Law School in Portland, Oregon. This book was previously published by BookWorld Publications in The Netherlands with ISBN 978 90 75228 25 0. *The Endangered Species Act and Federalism* Kaush Arha, Barton H. Thompson Jr., 2012-05-23 States today play a major role in implementing and enforcing environmental laws such as the Clean Air Act, Clean Water Act, and the Resource Conservation and Recovery Act. A thirty-year review of ESA identified state leadership in species conservation as a necessary element in better conserving the nation's imperiled species, yet the

theoretical and practical reasons and applications of an enhanced state role are little understood and have not been subjected to any meaningful analysis This book for the first time presents the legal and policy analysis for federalism considerations in implementing ESA The book undertakes a comprehensive analysis of the economic rationale for federalism in ESA administration compares administration of ESA to other major environmental statutes reviews various tools under the existing Act to enhance state role in species conservation evaluates major case studies to determine roles the state can play in species conservation and recovery and concludes with policy recommendations to encourage greater state involvement in species conservation The Wired Northwest Paul W. Peoples in Marine Areas Stephen Allen, Nigel Bankes, Øyvind Ravna, 2019-09-19 The question of what rights might be

afforded to Indigenous peoples has preoccupied the municipal legal systems of settler states since the earliest colonial encounters. As a result of sustained institutional initiatives, many national legal regimes and the international legal order accept that Indigenous peoples possess an extensive array of legal rights. However, despite this development, claims advanced by Indigenous peoples relating to rights to marine spaces have been largely opposed. This book offers the first sustained study of these rights and their reception within modern legal systems. Taking a three-part approach, it looks firstly at the international aspects of Indigenous entitlements in marine spaces. It then goes on to explore specific country examples before looking at some interdisciplinary themes of crucial importance to the question of the recognition of the rights of Indigenous peoples in marine settings. Drawing on the expertise of leading scholars, this is a rigorous and long overdue exploration of a significant gap in the literature.

When Ideology Trumps Science Erika Allen Wolters, Brent S. Steel, 2017-12-01. This book reveals how embedded beliefs more so than a lack of scientific knowledge and understanding are creating a cognitive bias toward information that coincides with personal beliefs rather than scientific consensus, and that this anti-science bias exists among liberals as well as conservatives. In 2010, an outbreak of whooping cough in California infected more than 8,000 people, resulting in the hospitalization of more than 800 people and the death of 10 infants. In 2015, an outbreak of the measles in Disneyland infected more than 125 people. Both the whooping cough and the measles are vaccine-preventable diseases, VPDs that have been largely nonexistent in the United States for decades. As these cases demonstrate, individuals who prioritize ideology or personal beliefs above scientific consensus can impinge on society at large, and they illustrate how rejecting science has unfortunate results for public health and for the environment. *When Ideology Trumps Science* examines how proponents of scientific findings and the scientists responsible for conducting and communicating the applicable research to decision makers are encountering direct challenges to scientific consensus. Using examples from high-stakes policy debates centered on hot-button controversies such as climate change, GMO foods, immunization, stem cell research, abstinence-only education, and birth control, authors Wolters and Steel document how the contested nature of contemporary perspectives on science leads to the possibility that policymakers will not take science into account when making decisions that affect the general population. In addition, the book identifies ways in which liberals and conservatives have both contested issues of science when consensus diverges from their ideological positions and values. It is a compelling must-read for public policy students and practitioners.

Unlikely Alliances Zoltán Grossman, 2017-06-20. Often when Native nations assert their treaty rights and sovereignty, they are confronted with a backlash from their neighbors who are fearful of losing control of the natural resources. Yet when both groups are faced with an outside threat to their common environment, such as mines, dams, or an oil pipeline, these communities have unexpectedly joined together to protect the resources. Some regions of the United States with the most intense conflicts were transformed into areas with the deepest cooperation between tribes and local farmers, ranchers, and fishers to defend sacred land and water. *Unlikely Alliances* explores this evolution from

conflict to cooperation through place based case studies in the Pacific Northwest Great Basin Northern Plains and Great Lakes regions during the 1970s through the 2010s These case studies suggest that a deep love of place can begin to overcome even the bitterest divides *Keeping Faith with Nature* Robert B. Sensing Changes Joy Parr, 2010-07-01 Our bodies are archives of sensory knowledge that shape how we understand the world But if global environmental changes continue at their present unsettling pace how will we make sense of time and place when the air land and water around us are no longer familiar Joy Parr one of Canada's premier historians tackles this question by exploring situations in the recent past when state driven megaprojects such as chemical plants dams nuclear reactors transportation corridors and new regulatory regimes forced people to cope with radical transformations in their work and home environments In each case the familiar was transformed so thoroughly that residents no longer recognized where they lived or by implication who they were *Sensing Changes* and its associated website <http://megaprojects.uwo.ca> make a key contribution to environmental history and the emerging field of sensory history This study offers a timely prescient perspective on how humans make sense of the world in the face of rapid environmental change
