Shukurov,1988-05-31 Magnetism when extended beyond normal frameworks into cosmic space is characterized by an enormous spatial scale Because of their large sizes the nature of magnets such as the Earth and the Sun is entirely different from the nature of a horseshoe magnet The source of cosmic magnetism is associated with the hydrodynamic motions of a highly conductive medium In this aspect cosmic magnets resemble a dynamo However currents in the dynamo flow along properly ordered wires while chaotic turbulent motions are dominant inside stars and liquid planetary cores This makes more intriguing and surprising the fact that these motions maintain a regular magnetic field Maintenance of magnetic fields is even more impressive in huge magnets i e galaxies In fact we are living inside a giant dynamo machine the Milky Way galaxy Although the idea of the global magnetic field of our Galaxy was clearly proposed almost 40 years ago firm observational evidence and definite theoretical concepts of galactic magnetism have been developed only in the last decade This book is the first attempt at a full and consistent presentation of this problem We discuss both theoretical views on the origin of galactic magnetism and the methods of observational study Previous discussions were on the level of review articles or separate chapters in monographs devoted to cosmic magnetic fields see e g H K Moffatt 1978 E N Parker 1979 and Zeldovich et al 1983 Magnetic Fields of Galaxies A.A. Magnetism when extended beyond normal frameworks into cosmic space is characterized by an enormous spatial scale Because of their large sizes the nature of magnets such as the Earth and the Sun is entirely different from the nature of a horseshoe magnet The source of cosmic magnetism is associated with the hydrodynamic motions of a highly conductive medium In this aspect cosmic magnets resemble a dynamo However currents in the dynamo flow along properly ordered wires while chaotic turbulent motions are dominant inside stars and liquid planetary cores This makes more intriguing and surprising the fact that these motions maintain a regular magnetic field Maintenance of magnetic fields is even more impressive in huge magnets i e galaxies In fact we are living inside a giant dynamo machine the Milky Way galaxy Although the idea of the global magnetic field of our Galaxy was clearly proposed almost 40 years ago firm observational evidence and definite theoretical concepts of galactic magnetism have been developed only in the last decade This book is the first attempt at a full and consistent presentation of this problem We discuss both theoretical views on the origin of galactic magnetism

and the methods of observational study Previous discussions were on the level of review articles or separate chapters in monographs devoted to cosmic magnetic fields see e.g. H. K. Moffatt 1978, E. N. Parker 1979 and Zeldovich et al 1983

Galactic and Intergalactic Magnetic Fields Ulrich Klein, Andrew Fletcher, 2014-11-05 This course tested textbook conveys the fundamentals of magnetic fields and relativistic plasma in diffuse cosmic media with a primary focus on phenomena that have been observed at different wavelengths Theoretical concepts are addressed wherever necessary with derivations presented in sufficient detail to be generally accessible In the first few chapters the authors present an introduction to various astrophysical phenomena related to cosmic magnetism with scales ranging from molecular clouds in star forming regions and supernova remnants in the Milky Way to clusters of galaxies Later chapters address the role of magnetic fields in the evolution of the interstellar medium galaxies and galaxy clusters The book is intended for advanced undergraduate and postgraduate students in astronomy and physics and will serve as an entry point for those starting their first research projects in the field

The Coevolution of Magnetic Fields and Galaxies in Different Environments Anna Williams, 2018 Magnetic fields pervade the universe They are observed on all astrophysical scales from planets to the intracluster medium Despite their ubiquity the origin and evolution of magnetic fields remains an outstanding question in astrophysics In this thesis I present new observations towards the construction of the cosmological timeline of magnetic field evolution With the Westerbork Synthesis Radio Telescope I probe a new physical depth into the magnetic field structure of the nearside halo of spiral galaxy NGC 6946 By combining these data with previous observations at other frequencies I model the magnetic field structure along the line of sight from the midplane to the halo I find that the galaxy is best described by a clumpy turbulent medium that extends from the midplane to the thick synchrotron disk 1 kpc and estimate the scale and strength of the turbulent fields in the halo From the isolated NGC 6946 I move to the loose galaxy group NGC 2563 to study the magnetic fields in the intragroup medium By comparing the Faraday rotation of distant sources behind NGC 2563 to the rotation measures of sources with sightlines surrounding it I am unable to detect signs of large scale fields as was previously observed in galaxy clusters I show evidence for a radial decrease in the Faraday dispersion as well as an increase in the magnitude of the Faraday rotation with impact distance to a known galaxy member These last two observations suggest the presence of magnetic fields in the intragroup medium as well as a mechanism for magnetizing that medium Lastly I present new observations of the Faraday rotation of 149 QSOs at $z \approx 0.6$

Large-scale Magnetic Fields in the Universe Rainer Beck, Andre Balogh, D. V. Bykov, Rudolf A. Treumann, Lawrence Widrow, 2012-11-15 A collection of sixteen coordinated reviews on the origins of large scale magnetic fields in the Universe this book discusses magnetic fields in all relevant astrophysical contexts from the interstellar medium to the scales of galaxies and clusters of galaxies Magnetic fields are described in their very diverse environments from stellar winds to galactic haloes and astrophysical jets together with the roles they play in forming the structures and shaping the

dynamics of these objects Both observational evidence and its theoretical interpretations are covered up to the largest scales in the Universe The authors are all leading scientists in their fields making this book an authoritative up to date and enduring contribution to astrophysics This volume is aimed at graduate students and researchers in astrophysics Previously published in Space Science Reviews journal Vol 166 1 4 and Vol 169 1 4 2012 Magnetic Fields in Diffuse Media Alexander Lazarian, Elisabete M. de Gouveia Dal Pino, Claudio Melioli, 2014-11-14 This volume presents the current knowledge of magnetic fields in diffuse astrophysical media Starting with an overview of 21st century instrumentation to observe astrophysical magnetic fields the chapters cover observational techniques origin of magnetic fields magnetic turbulence basic processes in magnetized fluids the role of magnetic fields for cosmic rays in the interstellar medium and for star formation Written by a group of leading experts the book represents an excellent overview of the field Nonspecialists will find sufficient background to enter the field and be able to appreciate the state of the art
