Bradley, David D. Stark, 1999 **Magnetic Resonance Imaging of Bone and Soft Tissue Tumors and Their Mimics** A.M.A. de Schepper, A.D. Degryse, 2012-12-06 Magnetic resonance imaging has already become a most valuable imaging modality in the diagnostic work up of musculoskeletal neoplasms While high accuracy of MRI for staging purposes has been proven we will focus in this monograph on the characterization of primary bone and soft tissue tumors by MRI The major purpose of this monograph is to provide an atlas of magnetic resonance features of primary bone and soft tissue tumors for radiologists orthopedic surgeons and physiotherapists The results presented are based on investigations of 94 primary bone and soft tissue tumors and mimicking conditions by magnetic resonance imaging Although the scale of the material allows for statistical handling the number of patients per subgroup is too small to come to definite conclusions We will therefore limit ourselves to the description of and comments on a great number of cases to illustrate the diagnostic potential of this new imaging modality We would like to thank the anonymous cooperators referring clinicians pathologists nurses technicians and secretaries whose help enabled us to present this monograph We would also like to express our gratitude to the firms Siemens AG and Schering AG for technical support Magnetic Resonance Imaging of the Brain, Head, and Neck William G. Bradley, W. Ross Adey, Anton N. Hasso, 1985 **MRI of the Brain, Head, Neck and Spine** Jaap Valk, 2012-12-06 With the growing number of MR installations clinicians and radiologist are being confronted more and more with visual information they do not feel as confident with as with the more mono form information of conventional radiographs CT and US The freedom of parameter choice of the MR operator allows the same object to be depicted in various ways and the contrast in the images to be changed and inverted at will For those not experienced in interpreting MR images this may cause confusion and uncertainty about their diagnostic content This will sometimes lead to an unnecessary retreat to other

diagnostic modalities The purpose of this book is to help close the gap between MR operators and readers and clinicians A variety of cases is presented together with the MRI considerations In nearly all these cases confirmation of diagnosis was obtained by histological examination Quite deliberately this book only includes the occasional CT scan or angiography for comparison to avoid the temptation of falling back on other modalities and of escaping from the often more difficult to interpret but in the end more rewarding MR images All the MR images in this book were made with a first generation unsophisticated Teslacon I 0.6 T superconducting magnet system Hopefully they will reflect the quality of the machine Some people will agree with me that it is sad that investments in expensive health care systems are subject to the whims of those who are mainly interested in satisfying their stockholders

Magnetic Resonance of Myelin, Myelination and Myelin Disorders Marjo S. van der Knaap, Jacob Valk, 2013-06-29

The first edition of this book was well received by readers and reviewers and we are very grateful for the positive reactions We were convinced then and even more now that MRI and MRS have much to offer in diagnosis therapy monitoring and research of hereditary and acquired myelin disorders In the last few years a great deal of new information has come available concerning the genetic basis of inborn errors of metabolism and neurodegenerative disorders the role of subcellular structures the enzyme biochemistry the pathophysiological mechanisms of posthypoxic ischemic cerebral damage and the inflammatory processes in infectious and inflammatory disorders MR images of many rare disorders have become available either in our own experience or published by other groups MR spectroscopy could confirm its role in certain clinical applications Because of these developments it was necessary for us to rewrite the book almost completely In some fields developments are so fast that we may not have caught all the latest developments The pattern of the new

approaches has however been established making the assimilation of newly available information easy We are extremely grateful for the help of colleagues to make this book as complete as possible The positive reactions of those from whom we requested MR pictures or other forms of support were of enormous encouragement to us during our efforts to complete this project We hope this work will be as warmly welcomed by our colleagues as the first edition
