advanced technologies go beyond subjective interpretations of market indicators to enhance traditional analysis. As a result, existing trading systems gain a competitive edge. Ruggiero reveals how incorporating elements of statistical analysis, spectral analysis, neural networks, genetic algorithms, fuzzy logic, and other high-tech concepts into a traditional technical trading system can greatly improve the performance of standard trading systems. For example, spectral analysis can be used to detect when a market is trending earlier than classical indicators such as ADX. Drawing on his extensive research on market analysis, Ruggiero provides an incisive overview of cyber systems that when applied correctly can increase trading returns by as much as 200% to 300%. The author covers a wide range of important topics, examining classical technical analysis methodologies and seasonal trading as well as statistically based market prediction and the mechanization of subjective methods such as candlestick charts and the Elliott Wave. Precise explanations and dozens of real-world examples show you how to incorporate advanced technologies into classical technical analysis methodologies. Identify which of these technologies have the most market applicability. Build trading systems to maximize reliability and profitability based on your own risk-reward criteria. Most importantly, *Cybernetic Trading Strategies* takes you step by step through system testing and evaluation, a crucial step for controlling risk and managing money. With up-to-date information from one of the field's leading authorities, *Cybernetic Trading Strategies* is the definitive guide to developing, implementing, and testing today's cutting-edge computer trading technologies.
