Mathematical Enculturation A Cultural Perspective On Mathematics Education:

Mathematical Enculturation Alan Bishop, 2012-12-06 Mathematics is in the unenviable position of being simultaneously one of the most important school subjects for today's children to study and one of the least well understood. Its reputation is awe inspiring. Everybody knows how important it is and everybody knows that they have to study it. But few people feel comfortable with it so much so that it is socially quite acceptable in many countries to confess ignorance about it to brag about one's incompetence at doing it and even to claim that one is mathophobic. So are teachers around the world being apparently legal sadists by inflicting mental pain on their charges? Or is it that their pupils are all masochists enjoying the thrill of self-inflicted mental torture? More seriously, do we really know what the reasons are for the mathematical activity which goes on in schools? Do we really have confidence in our criteria for judging what's important and what isn't? Do we really know what we should be doing? These basic questions become even more important when considered in the context of two growing problem areas. The first is a concern felt in many countries about the direction which mathematics education should take in the face of the increasing presence of computers and calculator-related technology in society.

Mathematics Education as a Research Domain: A Search for Identity Anna Sierpinska, Jeremy Kilpatrick, 2014-02-19 No one disputes how important it is in today's world to prepare students to understand mathematics as well as to use and communicate mathematics in their future lives. That task is very difficult, however. Refocusing curricula on fundamental concepts, producing new teaching materials and designing teaching units based on mathematicians' common sense or on logic have not resulted in a better understanding of mathematics by more students. The failure of such efforts has raised questions suggesting that what was missing at the outset of these proposals, designs and productions was a more profound knowledge of the phenomena of learning and teaching mathematics in socially established and culturally, politically and economically justified institutions, namely schools. Such knowledge cannot be built by mere juxtaposition of theories in disciplines such as psychology, sociology and mathematics. Psychological theories focus on the individual learner. Theories of sociology of education look at the general laws of curriculum development, the specifics of pedagogic discourse as opposed to scientific discourse in general, the different possible pedagogic relations between the teacher and the taught and other general problems in the interface between education and society. Mathematics, aside from its theoretical contents, can be looked at from historical and epistemological points of view, clarifying the genetic development of its concepts, methods and theories. This view can shed some light on the meaning of mathematical concepts and on the difficulties students have in teaching approaches that disregard the genetic development of these concepts.

Steve Lerman,2013-04-17 Mathematics teaching and learning have been dominated by a concern for the intellectual readiness of the child debates over rote learning versus understanding and recently mathematical processes and thinking The gaze into today s mathematics classroom is firmly focused on the individual learner Recently however studies of mathematics in social practices including the market place and the home have initiated a shift of focus Culture has become identified as a key to understanding the basis on which the learner appropriates meaning The chapters in this timely book attempt to engage with this shift of focus and offer original contributions to the debate about mathematics teaching and learning They adopt theoretical perspectives while drawing on the classroom as both the source of investigation and the site of potential change and development The book will be of fundamental interest to lecturers and researchers and to teachers concerned with the classroom as a cultural phenomenon *Mathematics Education in Different Cultural Traditions- A Comparative Study of East Asia and the West*

Frederick Koon-Shing Leung,Klaus-D. Graf,Francis J. Lopez-Real,2006-08-02 The idea of the ICMI Study 13 is outlined as follows Education in any social environment is influenced in many ways by the traditions of these environments This study brings together leading experts to research and report on mathematics education in a global context Mathematics education faces a split phenomenon of difference and correspondence A study attempting a comparison between mathematics education in different traditions will be helpful to understanding this phenomenon

Exploring Probability in School Graham A. Jones,2006-03-30 Exploring Probability in School provides a new perspective into research on the teaching and learning of probability It creates this perspective by recognizing and analysing the special challenges faced by teachers and learners in contemporary classrooms where probability has recently become a mainstream part of the curriculum from early childhood through high school The authors of the book discuss the nature of probability look at the meaning of probabilistic literacy and examine student access to powerful ideas in probability during the elementary middle and high school years Moreover they assemble and analyse research based pedagogical knowledge for teachers that can enhance the learning of probability throughout these school years With the book s rich application of probability research to classroom practice it will not only be essential reading for researchers and graduate students involved in probability education it will also capture the interest of educational policy makers curriculum personnel teacher educators and teachers *Making Sense of Mathematics Teacher Education* Fou-Lai Lin,Thomas J.
