Systems Theory - EUROCAST '89 Franz Pichler, Roberto Moreno-Diaz, 1990-02-07 Nonlinear Evolution Equations and Dynamical Systems NEEDS provides a presentation of the state of the art Except for a few review papers the 40 contributions are intentionally brief to give only the gist of the methods proofs etc including references to the relevant literature This gives a handy overview of current research activities Hence the book should be equally useful to the senior researcher as well as the colleague just entering the field Keypoints treated are i integrable systems in multidimensions and associated phenomenology ii criteria and tests of integrability e.g. Painlevé test iii new developments related to the scattering transform iv algebraic approaches to integrable systems and Hamiltonian theory e.g. connections with Young Baxter equations and Kac-Moody algebras v new developments in mappings and cellular automata vi applications to general relativity condensed matter physics and oceanography **LOGLAN '88 - Report on the Programming Language** Antoni

Kreczmar, Andrzej Salwicki, Marek Warpechowski, 1990-03-07 LOGLAN 88 belongs to the family of object oriented programming languages It embraces all important known tools and characteristics of OOP i.e. classes objects inheritance coroutine sequencing but it does not get rid of traditional imperative programming primitive types do not need to be objects records static arrays subtypes and other similar type constructs are admitted LOGLAN has non traditional memory model which accepts programmed deallocation but avoids dangling reference The LOGLAN semantic model provides multi level inheritance which properly cooperates with module nesting Parallelism in LOGLAN has an object oriented nature Processes are treated like objects of classes and communication between processes is provided by alien calls similar to remote calls

Graph-Theoretic Concepts in Computer Science Rolf H. Möhring, 1991-04-24 This volume gives the proceedings of WG 90 the 16th in a series of workshops The aim of the workshop series is to contribute to integration in computer science by applying graph theoretic concepts The workshops are unusual in that they combine theoretical aspects with practice and applications The volume is organized into sections on Graph algorithms and complexity VLSI layout Multiprocessor systems and concurrency Computational geometry Graphs languages and databases Graph grammars The volume contains revised versions of nearly all the papers presented at the workshop Several papers take the form of preliminary reports on ongoing research
