

The background of the slide is a collage of various engineering and mathematical diagrams. At the top left, there is a block diagram of a system with input u , a block labeled $G(s)$, and output y . To its right is a graph showing a signal $u(t)$ as a step function and the resulting output $y(t)$ as a smooth curve that rises and then levels off. Below these, on the left, is a mechanical system diagram showing a mass on a spring and damper, with a coordinate x and a force input F . In the center, the title "MATHEMATICAL MODELING AND DIGITAL SIMULATION FOR ENGINEERS AND SCIENTISTS" is written in large, bold, red capital letters. To the right of the title is a control loop diagram with a summing junction, a feedforward path with block $G(s)$, a feedback path with block $H(s)$, and a controller block $K(s)$. At the bottom left, there is a graph of power P_A versus time t , showing a constant value $1/4M$ labeled "Uniform". At the bottom right, there is a graph of a sawtooth wave x versus time t , with a period T and amplitude A .

State Models of Dynamic Systems
N.H. McClamroch, 2012-12-06 The purpose of this book is to expose undergraduate students to the use of applied mathematics and physical argument as a basis for developing an understanding of the response characteristics from a systems viewpoint of a broad class of dynamic physical processes This book was developed for use in the course ECE 355 Dynamic Systems and Modeling in the Department of Electrical and Computer Engineering at the University of Michigan Ann Arbor The course ECE 355 has been elected primarily by junior and senior level students in computer engineering or in electrical engineering Occasionally a student from outside these two programs elected the course Thus the book is written with this class of students in mind It is assumed that the reader has previous background in mathematics through calculus differential equations and Laplace transforms in elementary physics and in elementary mechanics and circuits Although these prerequisites indicate the orientation of the material the book should be accessible and of interest to students with a much wider spectrum of experience in applied mathematical topics The subject matter of the book can be considered to form an introduction to the theory of mathematical systems presented from a modern as opposed to a classical point of view A number of physical processes are examined where the underlying systems concepts can be clearly seen and grasped The organization of the book around case study examples has evolved as a consequence of student suggestions
